QUESTION 1

Which of the following activities does the Secure-Auditing Facility NOT monitor and record?

- A. Specific rows.
- B. Specific users.
- C. Specific tables.
- D. Specific DML operations.

Correct Answer: A

QUESTION 2

Under which condition can table fragments NOT be eliminated during query processing?

- A. Tables with non-overlapping fragments and an equality query predicate.
- B. Tables with round-robin distribution scheme and a range query predicate.
- C. Tables with non-overlapping fragments on a single column and a range query predicate.
- D. Tables with overlapping or non-contiguous fragments on a single column and an equality query predicate.

Correct Answer: B

QUESTION 3

Which of the following schema privileges allows you to rename a fragment?

- A. ALTER
- B. AMEND
- C. MODIFY
- D. RENAME

Correct Answer: A

QUESTION 4

Which statement about in-place migration is true?

- A. In-place migration is possible when an Informix instance is migrated from a non-Informix database management system.

- B. In-place migration is possible when an Informix instance is migrated from an older version of Informix on the same operating system.
- C. In-place migration is possible when an Informix instance is migrated from an older version of Informix on a different operating system.
- D. In-place migration requires that the DBA copy the database schema, user data, and user objects from the older version to the newer version of Informix.

Correct Answer: B

QUESTION 5

When a SELECT statement is executed which statement is true?

- A. The number and duration of the locks is dependent on the ISOLATION LEVEL.
- B. If COMMITTED READ isolation is in place then the SELECT will never encounter any locking errors.
- C. Within a transaction the database server will place row or page locks on anonlogging table.
- D. If the SELECT is part of an UPDATE cursor then the database server will place an exclusive lock on the entire dataset.

Correct Answer: A
