-  **800,000+** Satisfied Customers

### QUESTION 1

A company is using the IBM SOA Solution Stack to create a new composite application to keep up with the changing marketplace. Functions and data from several existing Enterprise Information Systems (EIS) will be aggregated into the new application using a top-down approach. See the information in the Exhibit.

Which solution is the most appropriate for implementation?

- A. Exposing existing applications using multiple adapters
- B. Exposing existing systems to heterogeneous clients
- C. Exposing existing applications with service components
- D. Exposing existing systems with a Web services gateway

Correct Answer: C

### QUESTION 2

A photo printing business has a central headquarters and approximately 5000 store fronts. Their latest project involves a website where customers can print their photos at the store location of their choice. The plan is to use a service hosted at each store front and route requests to the correct store.

Which patterns should be considered when designing this solution?

- A. Self-service, federated Enterprise Service Bus (ESB), service registry, caching
- B. Self-service, business delegate, extended enterprise, brokered ESB gateway

- C. Agent, router, exposed business services, multiple step information population
- D. Collaboration, ESB, facade, federated repository

Correct Answer: A

---

### QUESTION 3

An organization with a strong background in J2EE development and excellent IT governance is starting its first SOA project.

Using the Service Integration Maturity Model (SIMM) as a guide, which action should they take to extend their object oriented modeling capability to increase their chance of success with this SOA project?

- A. Focus on creating services rather than objects resulting in a shift to the services level in the application dimension.
- B. Adopt SOMA or an equivalent SOA method to increase the organization's capability in the methodology dimension.
- C. Deploy an Enterprise Service Bus (ESB) to begin to move them along the infrastructure dimension from enterprise standard to common SOA environment.
- D. Introduce a reference architecture to shift them from component architecture to SOA in the architecture dimension.
- E. Introduce the use of the service modeling profile in Rational Software Architect (RSA) or equivalent.

Correct Answer: B

---

### QUESTION 4

The IT organization for a government information office follows ITIL best practices. They use WebSphere Service Registry and Repository (WSRR) to manage the lifecycle of a service in their SOA. A mandate has been passed for the IT

organization to manage and control the service environment, including relationships and configuration.

Where should this new information be stored?

- A. All services and endpoint locations should be in the Service Registry and Repository.
- B. All services and endpoint locations should be in the configuration management database.
- C. Services and related configuration data should be in the Service Registry and Repository.
- D. Services and related configuration data should be in the configuration management database.

Correct Answer: D

---

### QUESTION 5

A large bank has a paper-based process for transferring funds between regional centers that takes days to complete. They want to use SOA to automate this process.

As an SOA Designer, what is a likely reason to also include Partner Services?

- A. The automated process needs to provide self service and status tracking of the process to its users.
- B. The funds transfer process involves service calls to an internal workflow that controls the final step.
- C. There is a requirement to use Extract/Transform/Load (ETL) to move information from one service to another.
- D. There is a business requirement to conform to interchange standards like Society for Worldwide Interbank Financial Telecommunication (SWIFT).

Correct Answer: D
