### QUESTION 1

Which three meet the requirement for SOA identity propagation?

- A. It translates between different identities.
- B. It requires the use of open standards for authentication.
- C. It handles services which each have their own identity registry.
- D. It handles identities which are coupled with application business logic.
- E. It provides a token that describes digital signature blocks within a message.
- F. It understands and operates with a variety of formats for representing identity.

Correct Answer: ACF

---

### QUESTION 2

How does the SOA governance body ensure that services are not redundant within the organization?

- A. It must manage service distribution and rights management.
- B. It must enforce communication between stakeholders and subject matter experts.
- C. It must enforce coordination between service providers across the organization.
- D. It must coordinate communication of business requirements to development organizations during the planning phase.

Correct Answer: C

---

### QUESTION 3

In the IBM SOA Reference Architecture, the service registry should be logically located with which other component?

- A. Access Services
- B. Process Services
- C. Infrastructure Services
- D. Enterprise Service Bus (ESB)

Correct Answer: D

---

#### QUESTION 4

A company has prioritized their most important requirements for SOA to be the need to speed up integration, reduce application redundancy and provide the flexibility to change service implementations.

Which type of project should be recommended?

- A. Create a common metadata model that can be used for all development projects.
- B. Implement an Enterprise Service Bus (ESB) and registry/repository as a connectivity layer in the SOA architecture.
- C. Document the existing architecture, legacy systems, and interfaces. Make this available in a common repository that can be accessed by all developers.
- D. Use business modeling tools to model and simulate the application development process and identify bottlenecks. Address highest priority bottlenecks that can be automated to E.

Correct Answer: B

---

#### QUESTION 5

Which two statements about security considerations in an SOA environment are true?

- A. Firewalls or routers are the mechanisms for securing an SOA business environment.
- B. Security policy decisions are made and carried out within an Enterprise Service Bus (ESB).
- C. Identities exist for both users and services, and both must be subject to the same controls.
- D. The creation of roles for business process task lists are used to prevent business partner access to protected assets.
- E. There is a need to manage identity and security across a range of systems and services that are implemented in a diverse mix of new and old technologies.

Correct Answer: CE
