QUESTION 1

Which of the following statements about Multi-Select Lists are correct?

- A. Domains that use multi-select lists must be specified within the MULTIPLE_SELECT section of the Application.prx file.
- B. The property specified for the TARGET element must have a Domain Definition that ultimately unwinds to the String type because multiple user selections will be concatenated into a tab-delimited string.
- C. The INITIAL element used should declare a MULTI-SELECT attribute with the value true.
- D. If a SOURCE element is used within the MULTI_SELECT definition to pre-select items in the list, the Server Interface property it refers to should contain a tab-delimited string.

Correct Answer: B

QUESTION 2

Which of the following are valid ways to enforce that a value be mandatory for a given attribute?

- A. Write custom logic at method level in the Java class
- B. Configure the Require_Mandatory property of the entity's attribute to be set to true
- C. Specify the name of the field in the Mandatory_Fields property of the modeled operation's argument struct
- D. Write a custom Java function to check for a value being present and specify the function on the Custom_Validation_Function_Name property of the relevant Domain Definition

Correct Answer: AC

QUESTION 3

Which of the following statements about aggregation in C

Correct Answer: BC

QUESTION 4

Which of the following statements are correct?

- A. After making modeling changes in RSA, build generated will be required, but build database may not be necessary.
- B. It is not necessary to stop the Server in Eclipse after making changes to the model in RSA, but it may be necessary to refresh the Server project in Eclipse.

C. The user should be able to view the application's starting page, providing at least Tomcat is running.

D. Irrespective of whether the Server is launched before Tomcat, or Tomcat before the Server, the application should still behave correctly in the browser.

Correct Answer: AD

QUESTION 5

Suppose that MessageFile.xml contains the following message identifier:

ERR_ENTRY_NOT_FOUND Which of the following is the valid way to create a C

Correct Answer: C
