QUESTION 1

An application sends a length encoded file that looks like the extract below. The first 3 bytes of each record indicates the size of the data that follows it.

```
001A
002AB
003ABC
004ABCD
003ABC
002AB
001A
```

A solution developer creates a JAXB class complex type in the Tagged/Defaulted String (TDS) format with two constituent elements `dataLength` and `data`, as per the screen capture below.

If both of these elements have their Physical Type set to Text, which one of the following options must the solution developer choose to correctly model the input data?

- A. dataLength of type xsd:int A.dataLength of type xsd:int data of type xsd:int with Length Reference set to dataLengthdata of type xsd:int with Length Reference set to dataLength
- B. dataLength of type xsd:short B.dataLength of type xsd:short data of type xsd:string with Length Reference set to dataLengthdata of type xsd:string with Length Reference set to dataLength
- C. dataLength of type xsd:int C.dataLength of type xsd:int data of type xsd:string with Length Reference set to dataLength and Inclusive Length Reference enableddata of type xsd:string with Length Reference set to dataLength and Inclusive Length Reference enabled
- D. dataLength of type xsd:string D.dataLength of type xsd:string data of type xsd:string with Length Reference set to dataLength and Inclusive Length Reference enableddata of type xsd:string with Length Reference set to dataLength and Inclusive Length Reference enabled

Correct Answer: B

QUESTION 2

A sales company is currently running 2 message flows. The first, ProcessOrder, validates customer orders and then sends the shipping information to the warehouse via an MQ request message. Once the warehouse has shipped the

order, a reply is sent back which is processed by the second flow, SendConfirmation, to send a confirmation to the customer. The company is now expanding and has multiple warehouses. The solution developer must modify ProcessOrder to send messages to each warehouse only for the items it stocks, and SendConfirmation to send a response message only when all warehouses have replied. What node(s) should the solution developer use?

- A. SendConfirmation -> MQGet
- B. SendConfirmation -> Collector
- C. ProcessOrder -> Sequence SendConfirmation -> Resequence
- D. ProcessOrder -> AggregateControl and AggregateRequest SendConfirmation -> AggregateReply

Correct Answer: D

QUESTION 3

A message flow with a JMSInput node receives a message with a blank Message Domain. The message is a TextMessage and does not include a JMSType header. Which domain parser should the solution developer expect the broker to use?

- A. XML
- B. BLOB
- C. XMLNSC
- D. JMSSStream

Correct Answer: A

QUESTION 4

In the figure, Project1 is a Message Broker Project that contains two message flows, Flow1 and Flow2. Project1 references Lib1 library. Flow1 and Flow2 use Error_handler subflow. The solution developer created two BAR files, Flow1Artifacts.bar for Flow1 and Flow2Artifacts.bar for Flow2 artifacts, and deployed the two BAR files to the same execution group.

After deployment, a defect is found in Flow2 and the solution developer adds more logging information to the Error_handler subflow to better understand the issue. The solution developer then rebuilds the BAR file Flow2Artifacts.bar and deploys it. What is the expected outcome?

- A. Flow2 captures the changes and Flow1 generates a runtime exception.
- B. Flow1 captures the changes and Flow2 generates a runtime exception.
- C. Flow1 and Flow2 capture the new Error_handler subflow logging information.
- D. Only Flow2 captures the changes and Flow1 continues to use the old Error_handler subflow logging information.

Correct Answer: C

QUESTION 5

A message flow that uses an SAPRequest node is reporting an expired password error in the system log. Which command does the solution developer need to issue to update the expired password?

- A. mqsicvp
- B. mqsisetdbparms
- C. mqsichangebroker
- D. mqsichangeproperties

Correct Answer: B
