QUESTION 1

A customer with in-house developed applications has many custom commands in library APPLIB that relate to the application programs. As part of a system audit, the administrator needs to run a report to determine which user profiles have authority to run the commands. Given the application library APPLIB, which report from the Security Tools menu should the administrator use to complete this task?

- A. Option 21 - Adopting Objects
- B. Option 40 - Program Authority
- C. Option 49- User Profile Authority
- D. Option 25- Command Private Authority

Correct Answer: D

QUESTION 2

An administrator is attempting to restore an application compiled at IBM i 6.1 to a production system running IBM i 7.1. While other programs compiled at IBM i 6.1 restored without issue, one program fails to restore on the production system even though it successfully restored to the test system.

What should the administrator do to resolve the problem?

- A. Change the system value QERCCVNRST to 2.
- B. Change the system value QALWOBJRST to *ALWPGMADP.
- C. Change the FRCOBJCVN parameter of the RSTLIB command to *YES.
- D. Recompile the program on the test system, and then migrate it to the production system.

Correct Answer: B

QUESTION 3

An administrator needs to access the HMC remotely from a browser on a desktop. When user ID "hscroot" is used, the authentication is successful. However, when user ID "admin" is used, the authentication fails, even though the ID has hmc super user as the Task Role. The user "admin" can sign on locally at the HMC.

What is the likely cause of the problem?

- A. The web access password for "admin" is expired.
- B. Only user "hscroot" has authority to the ETH1 device.
- C. The user "admin" is not a member of the "webadmin" group.
- D. Allow Remote Access via the Web has not been checked for the user id "admin."

Correct Answer: D

QUESTION 4

On an HMC-managed system with several partitions, the QSECOFR password for DST/SST has been disabled for one partition. No other profiles for DST/SST are known. What procedure will reset the password to the shipped value?

- A. Sign on to the partition as QSECOFR, issue the CHGDSTPWD PASSWORD(*DEFAULT) command.
- B. Use the function in the HMC for "Users and Groups" to modify the partition's DST password.
- C. Use the control panel function 21 from the HMC user interface to reset the SST/DST password.
- D. Connect to ASMI, use the "admin" profile to reset the DST password of the affected partition.

Correct Answer: A

QUESTION 5

An administrator has prepared an update package containing the prescribed groups and HIPER PTF5. When testing the package, a message is received stating some of the PTEs cannot be applied because others are missing.

What is the most efficient approach to accomplish a successful test?

- A. Apply the latest technology refresh.
- B. Apply the latest cumulative fix package.
- C. Inspect the job log for the missing PTFs.
- D. Read the PSP for cumulative updates for missing PTFs.

Correct Answer: C
