QUESTION 1

The CA Process Automation UI enables you to perform operations such as configuring domains, environments, orchestrators, agents, touchpoints, proxy touchpoints, and host groups. You can perform all these operations from the:

- A. Configuration tab
- B. Operations tab
- C. Designer tab
- D. Library tab

Correct Answer: A

QUESTION 2

The mail server for email notifications can be configured for all operators and processes by:

- A. Setting the hostname variable.
- B. Setting the outgoing mail server in Outlook.
- C. Defining an SMTPServer variable within your process.
- D. Modifying the SMTP Server for Outgoing e-mail setting in the Email module for the domain.

Correct Answer: D

QUESTION 3

You want to define a rule to run a set of tasks on the last day of each month. You create an object and name it LastOpenDayOfMonth, which will be used to specify the time to run backups and monthly reports. The object you created, which contains the necessary rule, is a:

- A. Policy object.
- B. Calendar object.
- C. Resource object.
- D. Schedule object.

Correct Answer: B

QUESTION 4

When you configure touch points, which factor should you consider?

- A. New touch points require the installation of a new agent.

- B. Agents and touchpoints have a strict one-to-one mapping.
- C. The environment in which the touchpoint is being created needs to be locked.
- D. Running an operation over multiple touchpoints requires a loop in the operation.

Correct Answer: C

QUESTION 5

Which statement about manipulating XML data in CA Process Automation is TRUE?

- A. CA Process Automation defines its own XPath query syntax.
- B. The applyXPath operator can be used to extract data from an XML document.
- C. CA Process Automation contains no system functions related to XML or XPath.
- D. In a CA Process Automation operator, if data returned from a Simple Object Access Protocol (SOAP) call is in XML format, you cannot retrieve the value of a specific XML element in this data.

Correct Answer: B
