users click on the Retailer name in the left and see the related data on the right. What is the technique used to create this report?

- A. Master-detail relationship where the master and the detail is in a separate list
- B. Drill-through definition where one column in a list drills through to a separate list in the same report
- C. Master-detail relationship where the master and the detail is in the same list
- D. Drill-through definition where one column in a list drills through to the same list in the same report

Correct Answer: B

QUESTION 2

In the report shown,

The screenshot shows a report interface. At the top, there is a 'Bookmark' menu with a 'Product line' option selected. Below the menu, there is a table with four columns: 'Product type', 'Product name', 'Product description', and 'Product cost'. The table contains three rows of data, each with placeholder text '<Product type>', '<Product name>', '<Product description>', and '<Product cost>'.

Product type	Product name	Product description	Product cost
<Product type>	<Product name>	<Product description>	<Product cost>
<Product type>	<Product name>	<Product description>	<Product cost>
<Product type>	<Product name>	<Product description>	<Product cost>

users click on the Product line link to navigate to the specific product line in the list below. Users can also click on the Top link to return to the Product line list at the top of the report. Bookmarks are used to control this drill-through behavior. How is each of the drill-throughs defined for this report to function as described?

- A. Product line drill-through: bookmark source type = Text, where Text =Top;Top drill-through: bookmark source type = Data Item Value, where Data Item = Product line
- B. Product line drill-through: bookmark source type = Data Item Label, where Data Item = Product line;Top drill-through: bookmark source type = Text, where Text =Top
- C. Product line drill-through: bookmark source type = Data Item Value, where Data Item = Product line;Top drill-through: bookmark source type = Text, where Text =Top
- D. Product line drill-through: bookmark source type = Text, where Text = Top;Top drill-through: bookmark source type = Data Item Value, where Data Item = Product line

Correct Answer: C

QUESTION 3

In Report Studio, if an author adds a prompt to a report page containing a list, how can the author prevent an automatically generated prompt from appearing when the report runs?

- A. Add a Static Choice
- B. Specify a Default Selection
- C. Set the Auto-Submit property to Yes
- D. Change the Required property to No

Correct Answer: B

QUESTION 4

An author creates a report in Report Studio. The report contains a parameter for the Product line query item. The author wants to let users drill through to this report from a variety of reports created using the GO Data Warehouse (query) package. To ensure that this target report contains data for the appropriate products, the author wants to limit the report cells that users can drill through from in source reports. What must the author do when creating the drill-through definition?

- A. Set the Product line query item as the target of the drill-through definition.
- B. Set the Product line query item as the scope of the drill-through definition.
- C. Add a parameter for the Product line query to the drill-through definition.
- D. Delete all data items except for the Product line query item from the drill-through definition.

Correct Answer: B

QUESTION 5
