QUESTION 1

An administrator is designing a VM cluster to support a new testing department in the company. This department will require high availability and the ability to migrate VMs with little impact to other network functions within the department. The infrastructure available for the department supports a 1GB internal backbone upon which virtual switches are being configured. Which of the following network designs would meet the criteria for the department?

- A. Assign the migration VLAN, management VLAN and storage VLAN on one virtual switch port and a client VLAN on a separate virtual switch port
- B. Assign the migration VLAN, management VLAN and client VLAN on one virtual switch port and assign the storage VLAN on a separate virtual switch port
- C. Assign the migration VLAN and client VLAN on one virtual switch port, and the management VLAN and storage VLAN on one virtual switch port
- D. Assign the migration VLAN, management VLAN, client VLAN and storage VLAN all on separate virtual switch ports

Correct Answer: D

QUESTION 2

The performance logs on a virtualization server show a large number of pages being written to disk at a high rate. Which of the following should the technician do?

- A. Increase the amount of swap space on the disk
- B. Increase the amount of physical memory
- C. Install and provision additional disk space
- D. Allocate additional CPU power to the guests

Correct Answer: B

QUESTION 3
