QUESTION 1

Joe, an administrator, has just added a new VM to a production network. Joe's workstation is connecting into the environment from a VPN. Other VMs on the same subnet are open to connections, however the new VM is inaccessible by RDP, SSH, or ping from Joe's workstation. Joe can ping other systems on the production network while connected into the new VM by console. Which of the following is the MOST likely source of the problem?

- A. VPN gateway
- B. Firewall ACL
- C. VLAN tag
- D. SSL certificate

Correct Answer: B

QUESTION 2

Which of the following describes the combination of a disk, computer, and a network into a pool of resources to efficiently allocate resources?

- A. Virtual resource reservation
- B. Zoning
- C. Load balancing
- D. Converged infrastructure

Correct Answer: D

QUESTION 3

Which of the following would be considered a cold site?

- A. A site that has air conditioning available, but no heat
- B. A duplicate site that has replication enabled
- C. A site that has telecommunications and network available
- D. A site that is completely functional and staffed

Correct Answer: C

QUESTION 4

An application has been moved to a new third-party public cloud provider. Which of the following should be completed

before load testing begins?

- A. Perform baseline measurements
- B. Notify the end user community
- C. Set up service level agreement
- D. Set up DHCP

Correct Answer: A

QUESTION 5

A company that provides cloud-based storage services wants to ensure that if underlying hard disk drives are sent to the disposal facility, they will not contain any data in clear-text format. Which of the following should be done to accomplish this task?

- A. Implement degaussing
- B. Ensure that ACLs are configured on users\' data
- C. Implement full-disk encryption
- D. Fill disk with random data before disposal

Correct Answer: C
