QUESTION 1

Which of the following statements regarding implementation of ABAP support packages are correct? (Choose two)

- A. Each ABAP software component, like SAP_BASIS or SAP_APPL, has its own support packages.
- B. Support packages can be implemented in an arbitrary order.
- C. With ABAP support packages, existing functions can be patched.

Correct Answer: AC

QUESTION 2

Which of the following statements regarding the transaction RZ10 are true? (Choose two)

- A. When you use the save button in RZ10 and activate the profile, it will be written immediately to the operating system level.
- B. You can compare the profile file on the operating system with the profile in the database.
- C. The default profile cannot be maintained using transaction RZ10.
- D. The maintained parameters will take effect immediately after the profile is activated in the RZ10.

Correct Answer: AB

QUESTION 3

How many clients can exist per AS ABAP-based SAP system?

- A. The maximum number is 1000 clients per SAP system
- B. As many as you want
- C. The number of clients per system is limited to 500

Correct Answer: A

QUESTION 4

Which statement regarding front end printing with SAP NetWeaver AS ABAP is correct?

- A. It is not possible to configure an output device for front end printing with SAP GUI for Java.
- B. If you want to configure an output device for front end printing with SAP GUI for Windows, you should choose access method G.
- C. If you want to configure an output for front end printing with SAP GUI for HTML, you have to choose access method

G.

Correct Answer: B

QUESTION 5

Tuning the performance of an SQL Server instance includes configuring the memory used by this instance on a given host. An optimal memory configuration depends on several aspects such as; memory requirements of the SQL Server itself, hardware resources, other applications installed on the host, or internal usage of the values of the two most important SQL Server parameters - min server memory and max server memory. For which exact purposes can the database administrator use these parameters? (Choose two)

- A. To determine the maximum size of memory used by the whole SQL Server system with help of max server memory
- B. To determine the maximum size of the buffer pool, because it never increases its memory allocation above the value specified in max server memory
- C. To determine the minimum size of the buffer pool, because it never drops its memory allocation below the value specified in min server memory
- D. To determine the maximum size of the data cache, because it never increases its memory allocation above the value specified in max server memory
- E. To determine the minimum size of the data cache, because it never drops its memory allocation below the value specified in min server memory

Correct Answer: B
