-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

What are the three elements of the risk triad from an information security perspective?

- A. Assets, threats, and vulnerabilities
- B. Actions, threats, and vulnerabilities
- C. Assets, threats, and countermeasures
- D. Assets, countermeasures, and vulnerabilities

Correct Answer: A

Risk Triad

- Defines risk in terms of threats, assets, and vulnerabilities

EMC E10-001 Student Resource Guide. Module 14: Securing the Storage Infrastructure

QUESTION 2

What describes a repudiation attack?

- A. An attempt to compromise accountability goals of the security

- B. Stealing a private key to decrypt the data-in-transit
- C. Unauthorized access to information to compromise confidentiality
- D. A series of repetitive attacks to the physical information infrastructure

Correct Answer: A

QUESTION 3

Which NAS backup environment uses a NAS head to retrieve data from storage over a SAN and then sends the data directly to the backup device?

- A. Serverless
- B. NDMP three-way
- C. NDMP two-way
- D. Server-based

Correct Answer: C

NDMP 2-Way

NDMP is an industry-standard TCP/IP-based protocol specifically designed for a backup in a NAS environment. It communicates with several elements in the backup environment (NAS head, backup devices, backup server, and so on) for data transfer and enables vendors to use a common protocol for the backup architecture. Data can be backed up using NDMP regardless of the operating system or platform. Due to its flexibility, it is no longer necessary to transport data through the application server, which reduces the load on the application server and improves the backup speed. NDMP optimizes backup and restore by leveraging the high-speed connection between the backup devices and the NAS head. In NDMP, backup data is sent directly from the NAS head to the backup device, whereas metadata is sent to the backup server.

Figure on the slide illustrates backup in the NAS environment using NDMP 2 -way. In this model, network traffic is minimized by isolating data movement from the NAS head to the locally attached backup device. Only metadata is transported on the network. The backup device is dedicated to the NAS device, and hence, this method does not support centralized management of all backup devices. EMC E10-001 Student Resource Guide. Module 9: Introduction to Business Continuity

QUESTION 4

What accurately describes a Vblock?

- A. Cloud infrastructure package
- B. Block-based storage device
- C. SMI specification
- D. Virtual tape library

Correct Answer: A

VBlock

- Integrated cloud infrastructure package
 - ▶ Includes compute, storage, network, and virtualization products
 - ▶ Delivered by EMC, VMware, and Cisco
- Enables building virtualized data center and cloud infrastructure
- Pre-architected, preconfigured, pretested, and ready to be deployed
 - ▶ Saves cost and deployment time

Vblock Infrastructure Package

Vblock is completely integrated cloud infrastructure offering that includes compute, storage, network, and virtualization products. These products are provided by EMC, VMware, and Cisco, who have formed a coalition to deliver Vblocks. EMC E10-001 Student Resource Guide. Module 13: Cloud Computing

QUESTION 5

What is a characteristic of unified storage?

- A. Supports multiple protocols for data access and managed through a single management interface
- B. Supports a common protocol for data access and managed through a unified management interface

C. Provides compute, storage, and network virtualization products in one solution

D. Stores all data in the form of objects and managed through a unified management interface

Correct Answer: A
