QUESTION 1

A customer is deciding whether to implement backups to either a single centralized backup server or to individual backup servers at the remote offices.

Which factor supports a decision to select a centralized backup solution?

A. Deploying multiple servers increases cost and complexity.

B. WAN connection bandwidth between locations is low.

C. A short recovery time objective must be met.

D. Remote offices are in different time zones.

Correct Answer: A

QUESTION 2

In a backup environment, what is the function of the client software component?

A. Coordinates the backup

B. Initiates recoveries

C. Stores tracking information

D. Writes data to a backup device

Correct Answer: D

QUESTION 3

Which function is performed by a SCSI initiator device?

A. Issue commands to a target device

B. Switch orientations depending on the role it plays in an I/O operation

C. Execute commands

D. Serve requests

Correct Answer: C

QUESTION 4

A customer states that a majority of their restore requests are within the first few hours since a backup. They require high availability of the data for restores and a low-cost, offsite, long-term storage solution.

What strategy would you suggest?

A. Backup to disk, then clone to tape

B. Backup to tape with multiplexing

C. Backup to tape without multiplexing

D. Backup to tape, then clone to disk

Correct Answer: A

QUESTION 5

What is a characteristic of EMC NetWorker deduplication with Avamar?

A. Identifies and stores only unique, variable-sized, subfile data objects

B. Uses target-based deduplication

C. Uses file-based deduplication

D. Identifies and stores only unique, fixed-sized, metafile data objects

Correct Answer: A
