QUESTION 1

You have a requirement to encrypt data that will be stored in several SAN-attached storage systems, including both disk arrays and tape libraries.

Which

solution would address this requirement?

- A. Cisco SME
- B. VMAX D@RE
- C. PowerPath/VE with RSA Encryption
- D. EMC VPLEX

Correct Answer: A

QUESTION 2

What is the key business goal when consolidating by business application?

- A. Virtualize the compute environment for efficiency
- B. Identify security gaps and increase security measures
- C. Reduce footprint by decreasing energy and space requirements
- D. Implement converged network technology for performance

Correct Answer: A

QUESTION 3

An application processes test results from a manufacturing facility, then generates and archives quality reports. The application runs on an old, but still supported UNIX system. It was developed by an organization's IT department 10 years ago. While it has not been changed in over five years, the application source code and skills needed to modify it are still available internally.

What is this an example of?

- A. A legacy application
- B. Vendor lock-in
- C. An enterprise application
- D. Service-oriented architecture

Correct Answer: A

QUESTION 4

What is the primary consideration when performing a risk assessment?

- A. Value of the asset
- B. Location of the asset
- C. Owner of the asset
- D. Quantity of exposures

Correct Answer: A

QUESTION 5

A company has several NAS storage systems serving both NFS and CIFS shares. They want to offer storage to their end users, masking the identity of the target storage so the users cannot tell which storage system they are using.

Which virtualization technique would work in this environment?

- A. File-level virtualization
- B. Mixed virtualization
- C. Distributed virtualization
- D. Block-level virtualization

Correct Answer: A
