QUESTION 1

A company is currently using RecoverPoint/CL with CLARiiON CXs in their environment. All of the data has been migrated to new VNXs and the CX splitters need to be removed from RecoverPoint.

How is this accomplished?

- A. In Unisphere for RecoverPoint, navigate to RPA Clusters > RPA-Cluster-Name tab > Splitters and remove the CX splitters
- B. In Unisphere for RecoverPoint, navigate to RPA Clusters > Splitters and remove the CX splitters
- C. Use RecoverPoint Deployment Manager to remove the CX splitters
- D. The CXs will not be detected by Unisphere and the splitter entries will be removed automatically

Correct Answer: A

QUESTION 2

A customer is interested in implementing a RecoverPoint solution using a four-node cluster with physical RPAs. How many total IP addresses are required for the cluster?

- A. 4
- B. 5
- C. 8
- D. 9

Correct Answer: D

QUESTION 3

After installing two RecoverPoint clusters you find that a Consistency Group cannot be configured with a remote copy. Why?

- A. Deployment Manager was not used to connect the clusters.
- B. The RPAs at the second cluster are not the same type (virtual vs physical).
- C. The second cluster has not yet been added to the Repository.
- D. There is no splitter added to the second cluster.

Correct Answer: A

QUESTION 4

During Consistency Group initialization, the host application experiences a performance impact. What can be used to reduce the negative impact on performance?

- A. I/O throttling
- B. Detect bottlenecks
- C. FC diagnostics
- D. IP diagnostics

Correct Answer: A

QUESTION 5

You are using the Test a Copy wizard and have chosen virtual access to test your database upgrade. The image has been mounted to a test host. While testing the database upgrade, the host loses access to the image.

What can you do to avoid this problem in the future?

- A. Add more journal capacity
- B. Add an RPA to the local RecoverPoint cluster
- C. Re-enable image access
- D. Mount the image to another host

Correct Answer: A
