QUESTION 1

While using Event Monitor in a centralized monitoring model, which component monitors for alerts?

- A. Management station
- B. Host Agent
- C. Domain Master
- D. SP Agent

Correct Answer: B

QUESTION 2

What will happen if a user removes an interface from a CIFS server?

- A. All the shares and users connected to the server via the interface will be disconnected.
- B. The interface will be removed ONLY if the CFS server has more than one interface. An error will be displayed if the CFS server has only one interface.
- C. Users cannot remove interface that is being used by a CIFS server. Upshpere will display an error message.
- D. the OPS server using the deleted interface will use the interface being used by the default CFS server.

Correct Answer: A

Explanation:

It is possible to remove an interface from a running CIFS Server, by un-marking the check box correspondent to the network interface in use. the A warning appears on the screen informing the administrator about the consequences of the change. The warning displays the message:

Unchecking the interface disconnects all the shares and users connected to the server via this interface.

Click ok to remove this interface from the list. (The server will no longer be accessible on the interface).

QUESTION 3

What EMC software product contains a collection of tools that helps you perform basic hardware and software maintenance tasks on an EMC VNX Unified storage system?

- A. Unisphere Service Manager (USM)
- B. Navisphere Service Taskbar (NST)

- C. CLARiiON Array Properties (CAP)
- D. Unisphere Off Array Client

Correct Answer: A

QUESTION 4

In which format is the SP signed certificate imported?

- A. PKCS#10
- B. X.500
- C. PKCS#12
- D. PEM

Correct Answer: D

QUESTION 5

You are provisioning a LUN on a VNX array with FAST VP enabled. In addition to Highest Tier Available and Lowest Tier Available, what other tier option(s) is displayed?

- A. Auto-Tier, No Data Movement
- B. Optimize for Performance
- C. Auto-Tier
- D. Optimize for Performance, No Data Movement

Correct Answer: C

Explanation:

The following table lists and describes the FAST policy settings. The FAST policy defines both initial tier placement and ongoing automated tiering of data. The sub-LUN data blocks are relocated according to the data relocation schedule which the user can customize.

Tiering policy	Corresponding initial tier placement	Description
Auto-Tier	Optimize for Pool Performance	The software distributes the initial data placement across all drive types in the pool, to maximize spindle usage for the LUN. Subsequent data relocation is based on the LUN performance statistics such that data is relocated among tiers according to I/O activity.
Highest Available Tier	Highest Available Tier	Sets the preferred tier for initial data placement and subsequent data relocation (if applicable) to the highest performing disk drives with available space.
Lowest Available Tier	Lowest Available Tier	Sets the preferred tier for initial data placement and subsequent data relocation (if applicable) to the most cost-effective disk drives with available space.
No Data Movement	No Data Movement	Prevents any ongoing data movement for this LUN. The current placement of data is retained. Only available as a LUN property after the LUN is created.
