QUESTION 1

Which component of Replication Manager controls replication jobs and stores data about each replica?

- A. Server
- B. Database
- C. Agent
- D. Appliance

Correct Answer: A

QUESTION 2

An administrator tries to modify the quota settings on a CIFS share from a Windows Server 2003 host, but the Quota tab does not exist in the network drive properties. What could be a possible cause?

- A. Quotas can be managed only with Windows Server 2008
- B. The user does not have administrator privileges on this share
- C. Exporting is implemented at the file system subdirectory level on VNX OE for File.
- D. Windows users cannot modify the quota settings

Correct Answer: C

Explanation:

There is a limitation in exporting a subdirectory and setting a quota on a file system from Windows 2000/2003/08. You will not see a quotas tab when exporting at the subdirectory level.

QUESTION 3

A VNX storage administrator adds some hosts with the read-only option to an existing NFS share. After a while, some users report that they are unable to write to this NFS export anymore.

What is the most likely cause?

- A. Required clients have not been added to the read/write option
- B. Users are connected to the Linux hosts specified in the read-only settings
- C. Entire subnet has been set to read-only
- D. Wrong IP address has been set in the read-only option

Correct Answer: A

QUESTION 4

Which describes the VNX Snapshot source LUN write process?

- A. Host issues write. New data is written to a new location.
- B. Host issues write. Old data is copied to the reserve LUN pool. New data is written to the source LUN.
- C. Host issues write. Data is written to the reserve LUN pool.
- D. Host issues write. Old data is copied to the source LUN. New data is written to the reserve LUN pool.

Correct Answer: A

QUESTION 5

Which statement is valid regarding SnapSure writeable snapshots?

- A. A baseline snapshot must be deleted prior to deleting the writeable snapshot.
- B. A writeable snapshot can be mounted RW during the background restore.
- C. Snapshots can be created from a writeable snapshot.
- D. A scheduled refresh on the read-only snapshot will fail if a writeable snapshot exists.

Correct Answer: D
