QUESTION 1

Enabling the session leak checker provides diagnostic information on session leaks and which other common dfc programming error?

- A. failure to close query collections
- B. failure to save modified docbase objects
- C. exceeding the allowed number of open query collections
- D. accessing an object to which the user has no BROWSE access

Correct Answer: A

QUESTION 2

Which statement is true about IDfClientX interface?

- A. It provides methods to add a Connection Broker to the list of brokers known to DFC.
- B. It provides methods to construct a session manager.
- C. It provides factory methods for operations.
- D. It provides methods to obtain an IDfTypedObject interface.

Correct Answer: C

QUESTION 3

How do you manually configure the DFC global registry?

- A. 1. add the dfc.bof.registry entries to the dfc.properties file.
- B. 1. encrypt the password2. add the dfc.bof.registry entries to the dfc.properties file.
- C. 1. activate the registry user2. change the password3. encrypt the password4. add the dfc.bof.registry entries to the dfc.properties file.
- D. 1. create a new user as a consumer2. designate the user as a registry user3. encrypt the password4. add the dfc.bof.registry entries to the dfc.properties file.

Correct Answer: C

QUESTION 4

Given the following SBO method (assume all variables are valid and createFolder() method exist): If the call to this SBO method is within a transaction, what is wrong with the code?

- A. commitTransaction() should not be called from within an SBO with a transaction already active.
- B. The SBO method should call its own beginTransaction() first.
- C. abortTransaction() is missing in the catch() block.
- D. Nothing is wrong.

Correct Answer: A

QUESTION 5

Given the following statement:

```
IDfld idObj = session.getIdByQualification("dm_sysobject where object_name is not null");
```

What is a possible problem with using getIdByQualification() in this manner?

- A. The assignment should be cast to SysObject.
- B. The "Select * from" portion is missing from the qualification.
- C. The qualification may solve for more than one Id, whereas the assignment of idObj requires only one.
- D. The qualification does not specify a request for the Id (or "Select r_object_id from" is missing in the qualification).

Correct Answer: C
