-  **800,000+** Satisfied Customers

#### QUESTION 1

A customer is configuring their SnapSure schedule. What run-time(s) should be avoided?

- A. The beginning of every half-hour
- B. The beginning of every hour
- C. 12:01 am and 12:01 pm
- D. Within 25 minutes of each other

Correct Answer: B

---

#### QUESTION 2

What is the default file system type for the VNX?

- A. UxFS
- B. VxFS
- C. XFS
- D. UFS

Correct Answer: A

---

#### QUESTION 3

You have a customer environment where deployment time is crucial. Disaster Recovery setup is a "must have" for production. There is a 10 Gbe network infrastructure between the sites.

The customer informs you that any changes in the network infrastructure will have a long lead time. Also, the FC blades for their SAN have not been delivered yet.

What is the best way to fulfill their requirements?

- A. Configure Data Mover networking using FSN Configure MirrorView for block replication
- B. Configure Data Mover networking using LACP Configure MirrorView for block replication
- C. Configure Data Mover networking using LACP Wait for the FC blades to be delivered
- D. Configure Data Mover networking using FSN Configure Replication Manager for block replication

Correct Answer: A

---

#### QUESTION 4

A customer needs to give a host 300 GB of disk space to improve performance. The VNX to be used has three RAID groups available.

-

RAID group 1 is RAID 5 (4+1) with 240 GB free

-

RAID group 2 is RAID 5 (4+1) with 220 GB free

-

RAID group 3 is RAID 5 (6+1) with 250 GB free

The utilization of each RAID group is minimal and all use 300 GB SAS drives. Keeping in mind the best practices, how would you create a metaLUN?

- A. Striped with 100 GB on RAID group 1, RAID group 2 and RAID group 3.
- B. Concatenated with 50 GB on RAID group 1 and 250 GB on RAID group 3.
- C. Striped with 150 GB on RAID group 1 and RAID group 2.
- D. Concatenated with 100 GB on RAID group 1, RAID group 2 and RAID group 3.

Correct Answer: C

---

#### QUESTION 5

A customer is suspicious of unauthorized access to their VNX file share. IT management needs to monitor user activity and access.

What can be done to accomplish this?

- A. Enable and define the audit policy per CIFS server
- B. Enable and configure CEPA on the VNX
- C. Enable and configure CAVA on the VNX
- D. Install Microsoft SCOM to monitor the VNX CIFS servers

Correct Answer: A
