### QUESTION 1

A customer would like to capture a NAR file with 26 hours of data outputted by Unisphere. What should the archive interval be set to?

- A. 600 seconds
- B. 300 seconds (default)
- C. 60 seconds
- D. 1200 seconds

Correct Answer: A

---

### QUESTION 2

A customer is concerned with the time it takes to expand a metaLUN. Currently the customer has a striped metaLUN composed of five components, and wants to expand it quickly while still having the best possible performance.

Which solution would you recommend?

- A. Create a hybrid metaLUN with another striped metaLUN made from five different RAID groups.
- B. Expand the metaLUN by striping another five components on the same RAID groups.
- C. Expand the metaLUN by striping another component on a different RAID group.
- D. Expand the metaLUN by concatenating another five LUNs from different RAID groups.

Correct Answer: A

---

### QUESTION 3

A customer decided to add CIFS share access to an existing VNX for File implementation. You are making recommendations to ensure maximum server portability for local load balancing.

Which change must you recommend?

- A. Default interface names can no longer be used.
- B. Unique interface addressing can no longer be used.
- C. Two interconnects must be declared per Data Mover.
- D. Replicator SavVol size must be increased.

Correct Answer: A

---

#### QUESTION 4

What is a primary capability of Data Protection Advisor (DPA)?

- A. Suggest improvements to the replication environment
- B. Quiesce DB2 and start a backup
- C. Create and delete snapshots
- D. Audit multipath count and status

Correct Answer: A

---

#### QUESTION 5

You are designing the optimal networking environment for an ISP. According to the customer, high availability is more important to them than bandwidth.

What should you ask about first when you meet the Network Administrator?

- A. Cross-Stack, VLAN requirements
- B. EtherChannel, DNS servers
- C. FSN, VLAN requirements
- D. LACP, DNS servers

Correct Answer: A
