QUESTION 1

A storage administrator configured a SnapSure snapshot schedule for a heavily utilized production file system. According to the schedule, three snapshots are to be created per hour, with the first snapshot created at one minute past the hour.

After an hour, the administrator noticed that the first snapshot was not created on time.

What is the cause of this issue?

A. The VNX for File database backup has started in the background.

B. The PFS SavVol has run out of space.

C. The VNX for File has experienced a network outage.

D. The HWM was not configured manually for Auto Extension.

Correct Answer: A

QUESTION 2

A customer has an application that uses a small amount of capacity but has very high performance requirements. The customer initially configured the LUNs using the Highest Available Tier option and now wants to configure the FAST VP policy to ensure LUNs allocated to this application always stay on higher performance storage.

What do you advise?

A. The policy should be set to Highest Available Tier.

B. Initially set the policy to Lowest Available Tier, then Auto-Tier.

C. The policy should always be set to Auto-Tier.

D. Initially set the policy to Highest Available Tier, then Auto-Tier.

Correct Answer: A

QUESTION 3

You are migrating a LUN within a VNX series array to an equal size LUN but with a different RAID type.

Which step is required to start using the new LUN?

A. Nothing. The migration process is non-disruptive.

B. Ensure the LUN is in the proper storage group at the time of cut-over

C. Ensure the size of the destination LUN is equal to or greater than the source LUN

D. Quiesce the host prior to final cut-over

Correct Answer: A

QUESTION 4

A company has many VNX file systems that they currently export using NFS. Their goal is to simplify the management of these file systems for the Linux client workstations. How can the storage team help the company achieve this goal?

A. Create a nested mount file system to export all the file systems as a single namespace to mount on the clients.

B. Create administrative exports to the file system roots and community exports for their subdirectories.

C. Create AVM file systems and enable auto extend on the file systems.

D. Mount each file system manually to maintain control of individual export permissions.

Correct Answer: A

QUESTION 5

How do storage pool thick LUNs affect capacity?

A. A storage pool thick LUN uses slightly more capacity than the amount of user data written

B. A storage pool thick LUN uses less capacity than the amount the server operating system sees

C. Capacity of a storage pool thick LUN uses the same capacity as the server operating system sees

D. Capacity of a storage pool thick LUN uses less user capacity then a traditional LUN

Correct Answer: A
