-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

By default, which database is automatically deployed on the Data Protection Advisor server?

- A. MSDE
- B. PostgreSQL
- C. MySQL
- D. Anywhere

Correct Answer: D

The DPA Server component is the core component of the product. The server manages all data stored within the system and provides the methods for the user to view data and to receive alerts. The Server component can run on either Solaris, Windows, or Linux. DPA can work with an embedded iAnywhere database that is automatically installed on the server during the install process, or with an external database that must be supplied and managed by the customer. DPA supports the following external databases: ?Oracle in Solaris environments ?Microsoft SQL Server in Windows environments ?Oracle and PostgreSQL in Linux environments

QUESTION 2

A customer, using Avamar version 4, wants to use VMware Consolidated Backup (VCB) to back up their version 3.x ESX servers. Which operating system(s) can they run on their proxy server?

- A. Microsoft Windows 2003 and Red Hat Enterprise Linux 4
- B. Microsoft Windows 2003
- C. Microsoft Windows 2003 and Windows 2008
- D. Red Hat Enterprise Linux 4

Correct Answer: B

Avamar VCB Interoperability Module. The Avamar agent and the interoperability module run on the Consolidated Backup proxy server to provide the backup services. One backup server can provide backup services to many ESX server hosts, as long as all machines share the same SAN (storage area network). With this approach, users have several advantages. By consolidating backups onto fewer proxy servers, backup can be simplified and backup licensing costs for VMware environments can be reduced. VCB reduces the load on the ESX Server during backups, eliminating the need to manage backup agents in each virtual machine. And, because of its method of transferring data using the SAN, LAN traffic associated with backup is reduced. With this approach, there is no direct application integration as is possible with guest backups using Avamar database plug-ins.

Note: Backup proxy server supported on Windows 2003 server only.

QUESTION 3

What is an Avamar checkpoint?

- A. An integrity hardware check of the Avamar grid
- B. A read-only snapshot of the Avamar storage node(s) to synchronize with replicated nodejs;
- C. A full copy of backup data
- D. A read-only snapshot of the Avamar server taken to enable server rollbacks

Correct Answer: D

QUESTION 4

A customer has a Symantec NetBackup environment at two locations, each with EMC Data Domain as the target for backups. They are replicating data between the two sites.

The customer now requires that the Media/Master server is aware of both Data Domain systems for restoring files. Which feature meets this requirement?

- A. DD Boost
- B. Pool Replication
- C. Directory Replication
- D. SISL

Correct Answer: A

QUESTION 5

An EMC NetWorker administrator needs to perform a recovery of data from a failed client to a new client. Which type of recovery should be performed?

- A. Disaster
- B. Server
- C. Directed
- D. Save set

Correct Answer: C
