QUESTION 1

A Dell EMC NetWorker backup administrator wants to identify bottlenecks for a file server with poor backup performance. The administrator discovers that Client Direct is disabled for the file server. What happens when Client Direct is enabled?

- A. Backup data is sent directly to the target device and metadata is sent to the storage node.
- B. Backup data is sent directly to the target device and metadata is sent to the NetWorker server.
- C. Backup data is sent to the storage node and metadata is sent to the NetWorker server.
- D. Backup data and metadata are sent to the storage node and then to the target device.

Correct Answer: A

QUESTION 2

An EMC NetWorker administrator wants to find all the files within a save set that are still browsable by the client.

Which command will allow the administrator to perform this task?

- A. nsrinfo
- B. nsrls
- C. mminfo
- D. inquire

Correct Answer: A

QUESTION 3

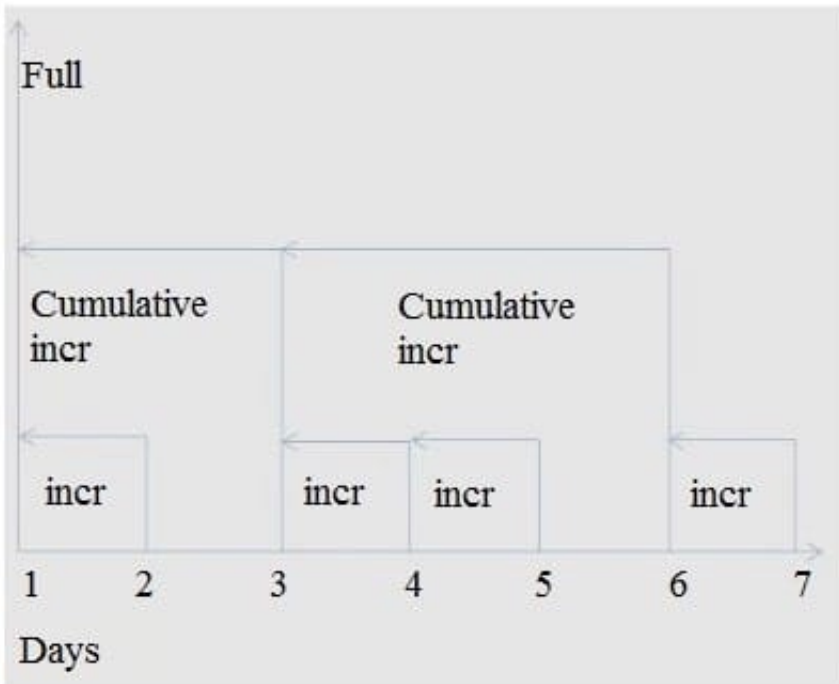

A client save set is backed up to an EMC NetWorker backup pool and later cloned to a volume in a clone pool.

Which parameter determines when the volume in the clone pool is a candidate for recycling?

- A. Longest retention time of any save set on the clone volume
- B. Longest retention time of any differential save set on the clone volume
- C. Longest retention time of any full save set on the clone volume
- D. Longest retention time of any incremental save set on the clone volume

Correct Answer: A

QUESTION 4

A Dell EMC NetWorker administrator configured their backups for save set "C:\Users\" to run daily at 12:00 PM with levels based on the exhibit. At 1:00 AM on Day 3, file "C:\Users\John\myscript.txt" was deleted. At 5:00 PM on Day 4, folder

"C:\Users\John\" was renamed to "C:\User\John_old".

On Day 7, the administrator decided to recover the entire save set back to Day 6. Based on this environment, which result can be expected?

- A. myscript.txt file will not be recovered under "C:\Users\John\"
- B. myscript.txt file will be recovered under "C:\User\John_old\"
- C. myscript.txt file will not be recovered under "C:\User\John_old\"
- D. myscript.txt file will be recovered under "C:\Users\John\"

Correct Answer: D

QUESTION 5

Which EMC NetWorker feature allows for a failed backup to restart at a known good point prior to the backup failure?

- A. CheckPoint Restart
- B. Client Retries
- C. Scheduled Backup Attempts
- D. Restart Window

Correct Answer: A
