QUESTION 1

Replication Manager (RM) is being used to create replicas for a SQL server installed on VMFS residing on an ESX server. The operations are sent from a separate virtual RM proxy host. However, the RM is not able to successfully create copies.

What is the most likely cause of the failure?

- A. The RM proxy host is not registered with the RM server.
- B. The RM proxy is not a physical host.
- C. The RM server is unable to communicate with the RM proxy over port 445.
- D. The RM server credentials were not properly entered for the RM proxy.

Correct Answer: A

QUESTION 2

A VNX customer has several users on their CIFS share, which is also used for dedupe/compression. In addition, replication is in place with checkpoints on both ends to handle backup needs. Since dedup was activated a few days ago, all changed blocks that the dedupe process flags to eliminate from the primary FS get copied into the SavVol. Now, deduplication has been aborted. What could have caused this to happen?

- A. The SavVol was extended
- B. The SavVol extension protection mechanism was disabled
- C. Older checkpoints were deleted
- D. Checkpoints were deleted out of order

Correct Answer: A

QUESTION 3

A customer with a VNX configured with homogenous pools wants to upgrade the performance of their array. The customer has a limited budget.

Which approach would you recommend?

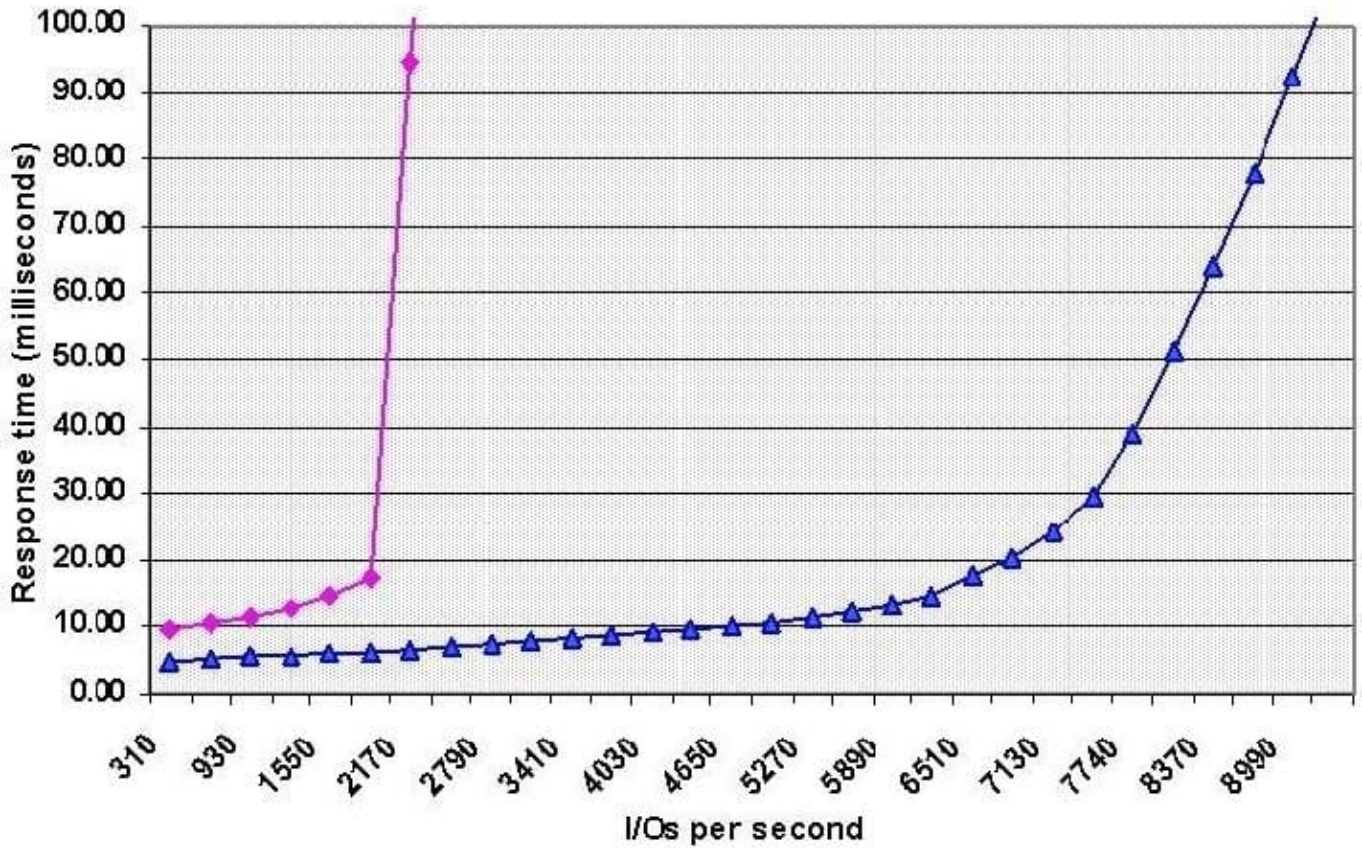

- A. Create a mirrored FAST Cache
- B. Create a R5 3+1 FAST Cache
- C. Create a FAST VP Tier
- D. create a homogeneous flash pool

Correct Answer: A

QUESTION 4

Refer to the Exhibit.

An administrator is checking the load on the array. The administrator is trying to determine if this is an acceptable range (between 8370 and 8990 IOPs). Based on the illustration, what can you conclude?

- A. The array is being saturated
- B. The array is at moderate operation
- C. The array's load is light, with low response.
- D. The array is in acceptable range

Correct Answer: A

QUESTION 5

A customer is implementing a VNX for File solution in a performance-oriented application environment. There are Windows and Linux VM clients accessing the file systems. The customer wants to track both file system and Data Mover utilization. The administrator prefers GUI to CLI access.

Which utility should you recommend?

- A. Unisphere Statistics for File
- B. server_stats
- C. Unisphere Monitor
- D. Unisphere Analyzer

Correct Answer: A
