QUESTION 1

What is a characteristic of Avamar encryption?

A. All data in the client-to-server and server-to-client authentication can be encrypted.

B. All network data in both client-to-server and server-to-client authentication is always encrypted.

C. Only the authentication requests from server to client can be encrypted.

D. A private certification authority must be used to allow encryption of authentication data.

Correct Answer: A

QUESTION 2

A company has Microsoft SQL databases. They often have a need to perform redirected recoveries of these databases to a different server. They are challenged by the fact that the storage layout on the recovery server does not always match the original backup, causing the recovery to fail.

What is the most efficient method to overcome this challenge?

A. Perform a file system recovery of the f-0 file and use SQL Server Manager to manually adjust the layout.

B. Ensure the recovery server storage is provisioned to match the backup prior to initiating the recovery.

C. Perform a database redirected restore with a tail-log backup to the other instance.

D. Perform the recovery as a database using SQL Server Manager to adjust the layout to match that of the recovery server.

Correct Answer: A

QUESTION 3

An EMC Avamar backup administrator wants to use their company login account for administering an Avamar server. The configuration for external LDAP authentication was updated successfully. However, they still cannot successfully log into Avamar Administrator with the account. Which action is needed?

A. Restart Avamar Login Manager

B. Make the Avamar password the same as in LDAP

C. Add the account to the Avamar server O/S

D. Specify the LDAP domain in the domain field of the login screen

Correct Answer: A

QUESTION 4

A customer is performing Dell EMC Avamar backups to a Dell EMC Data Domain. What path does Data Domain use to store incomplete or cancelled backups?

A. avamar-/STAGING//BACKUP-/

B. avamar-/STAGING/BACKUP-/

C. avamar-/STAGING/BACKUP-/

D. avamar-/STAGING/BACKUP-/

Correct Answer: B

QUESTION 5

A customer with a single server MS Exchange 2010 solution is using Avamar as its backup solution. They are adding two more standalone Exchange servers to enhance the performance of their email environment. What needs to be configured in Avamar to back up data from all three servers?

A. Install Exchange VSS client on the new servers.

B. Install and configure the Avamar Windows Cluster Client to include the new servers.

C. Uninstall the Exchange VSS Client from the first server and reinstall this client on all three servers.

D. Install the legacy Avamar 6.0 Exchange Database plug-in on all three servers.

Correct Answer: A
