QUESTION 1

The following script is run from a record on a layout based on a table occurrence that is not related to the Product table occurrence:

Go to Related Record [Show only related records Match found set From table: "Product" Using layout: "Product" (Product)]

Delete All Records [No dialog]

What happens after the script is run?

- A. All records in the current table are deleted.
- B. All records in the Product table are deleted.
- C. All records in the current found set are deleted.
- D. All records in the current found set for the Product table are deleted.

Correct Answer: C

QUESTION 2

Given the following relationship graph:

Without inspecting the data, what can be assumed about this database?

- A. In the Event table, the Event ID has no index.
- B. For each Task record there will be exactly one related Volunteer record.
- C. Each record in the Task table will represent a unique combination of Volunteer ID and Event ID.
- D. The relationship between Task and Event will not allow the Allow creation of records... nor the Delete related records... settings to be enabled for the Event table.

Correct Answer: A

QUESTION 3

Which two statements are true in a FileMaker Pro 11 database containing scripts? (Choose two.)

- A. Multiple changes to multiple scripts can be saved using Save All Scripts.
- B. Saving changes to a currently running script will cause the execution of the script to halt.
- C. Running a script while other scripts have unsaved changes will cause all unsaved changes to be reverted.
- D. The Step Into button in the Script Debugger can be used to force the execution of a disabled script step.
- E. Closing the Manage Scripts window will prompt the user to save changes to the order or grouping of scripts.

Correct Answer: AB
