- C. Slack spaces
- D. Allocated cluster

Correct Answer: ABC

QUESTION 4

You work as a Network Administrator for Net Perfect Inc. The company has a Windows Server 2008 network environment. The network is configured as a Windows Active Directory-based single forest single domain network. The network is configured on IP version 6 protocol. All the computers on the network are connected to a switch device. One day, users complain that they are unable to connect to a file server. You try to ping the client computers from the server, but the pinging fails. You try to ping the server's own loopback address, but it fails to ping. You restart the server, but the problem persists.

What is the most likely cause?

- A. The cable that connects the server to the switch is broken.
- B. Automatic IP addressing is not working.
- C. The switch device is not working.
- D. The server is configured with unspecified IP address.
- E. The server's NIC is not working.

Correct Answer: E
