### QUESTION 1

An organization is adding wireless access points to their facility and it is expected that the signal will extend beyond the physical perimeter of the facility.

What is a compensating control for this situation?

- A. Change default access point password
- B. Add video surveillance to the facility
- C. Place wireless access points in locked cabinets
- D. Encrypt wireless network communication

Correct Answer: D

---

### QUESTION 2

Which of the following is the most cost-effective time for identifying and fixing a SQL injection coding error?

- A. Staging
- B. Beta
- C. Development
- D. Integration

Correct Answer: C

---

### QUESTION 3

John works as a professional Ethical Hacker. He has been assigned a project to test the security of [www.we-are-secure.com](http://www.we-are-secure.com). He wants to test the effect of a virus on the We-are-secure server. He injects the virus on the server and, as a result, the server becomes infected with the virus even though an established antivirus program is installed on the server. Which of the following do you think are the reasons why the antivirus installed on the server did not detect the virus injected by John? Each correct answer represents a complete solution. Choose all that apply.

- A. The virus, used by John, is not in the database of the antivirus program installed on the server.
- B. John has created a new virus.
- C. The mutation engine of the virus is generating a new encrypted code.
- D. John has changed the signature of the virus.

Correct Answer: ABCD

---

#### QUESTION 4
