### QUESTION 1

Adam works as a Software Developer for ABC Inc. He creates an ASP.NET application, named MyApp. During beta testing of MyApp, he ensures that both developers and beta testers see the actual text of error messages. Adam performs beta testing of other applications on the same test server. All the other applications display ASP.NET error messages. After completing beta testing, Adam promotes the beta test server to a production server. He wants all the applications to display a single, userfriendly error message. Adam also wants to configure MyApp and the production server to meet these goals. What will he do to accomplish the required task with minimum administrative effort?

- A. In the Web.config file for MyApp, add the following element:
- B. In the Machine.config file, add the following element:
- C. In the MyApp.config file, add the following element:
- D. In the MyApp.config file, add the following element:
- E. In the Web.config file for MyApp, add the following element:
- F. In the Machine.config file, add the following element:

Correct Answer: B

---

### QUESTION 2

Mark works as a Software Developer for GenTech Inc. He develops an application, named App1, using Visual Studio .NET. The application contains a Form control, named Form1, which enables users to edit information in a SQL Server database. Mark wants to save all the changes made by users in the database. He defines a boolean variable, named DataIsSaved, in the application code. DataIsSaved indicates whether or not all data are saved in the database. Mark wants to prevent Form1 from closing until all the changes are saved in the database. Which of the following code will he use to accomplish this?

- A. `protected void Form1_Leave(object sender, System.ComponentModel.CancelEventArgs e) { if(!DataIsSaved)`
- B. `Cancel = false; else`
- C. `Cancel = true; }`
- D. `protected void Form1_Leave(object sender, System.ComponentModel.CancelEventArgs e) { if(!DataIsSaved)`
- E. `Cancel = true; else`
- F. `Cancel = false; }`
- G. `protected void Form1_Closed(object sender, System.ComponentModel.CancelEventArgs e) { if(!DataIsSaved)`
- H. `Cancel = false; else`
- I. `Cancel = true; }`
- J. `protected void Form1_Closing(object sender, System.ComponentModel.CancelEventArgs e) { if(!DataIsSaved)`
- K. `Cancel = false; else`

L. Cancel = true; }

M. protected void Form1\_Closed(object sender, System.ComponentModel.CancelEventArgs e) { if(!DatalsSaved)

N. Cancel = true; else

O. Cancel = false; }

P. protected void Form1\_Closing(object sender, System.ComponentModel.CancelEventArgs e) { if(!DatalsSaved)

Q. Cancel = true; else

R. Cancel = false; }

Correct Answer: F

---

### QUESTION 3

Charles works as a Web Developer for Cyber Net Inc. The company frequently receives production information from external vendors in the form of XML data. Charles stores these XML data in a disk container of the Web server as .xsd schema files and .xdr schema files. There are specific rules for writing XML codes to define the structure and data types for XML documents. Which of the following criteria should NOT be considered while writing an XML document?

Each correct answer represents a complete solution. Choose all that apply.

A. A well-formed XML document should contain a start tag but not necessarily an end tag.

B. An XML document must enclose the beginning and ending points of a tag by using the symbols '<<' respectively.

C. A well-formed XML document should contain a start tag and an end tag.

D. An XML document should be specified according to the application or business requirements.

E. An XML document should have predefined elements and attributes.

Correct Answer: AE

---

### QUESTION 4

Which of the following providers is a block cipher that encrypts and decrypts data in blocks of 8 bytes?

A. RNGCryptoServiceProvider

B. SHA1CryptoServiceProvider

C. RC2CryptoServiceProvider

D. RSACryptoServiceProvider

Correct Answer: C

---

**QUESTION 5**

You work as a Web Application Developer for ABC Inc. The company uses Visual Studio .NET as its application development platform. You are creating a Web application using .NET Framework 2.0. The application is accessed by ABC users and some of ABC's affiliates. All users who access the application must have their credentials stored in the UCData database. You need to implement a login page that authenticates users against the UCData database. What will you do?

- A. In the Web.config file, set the Authentication Mode to Passport.
- B. In the Web.config file, set the Authentication Mode to None.
- C. In the Web.config file, set the Authentication Mode to Windows.
- D. In the Web.config file, set the Authentication Mode to Forms.

Correct Answer: D
