QUESTION 1

You work as a Software Developer for Mansoft Inc. You create an application and use it to create code access security policies. Which of the following tools will you use to examine and modify code access security policies from a batch file?

- A. Tlbimp.exe
- B. GacUtil.exe
- C. Sn.exe
- D. Caspol.exe
- E. StoreAdm.exe

Correct Answer: D

QUESTION 2

You work as an Enterprise Application Developer for ABC Inc. The company uses Visual Studio 2008 as its application development platform. You create a web application using .NET Framework 3.5. You have created a form named Form1. You have added Textbox controls for taking Name, Address, and Phone Number of user as input in Form1. You want to ensure that a user enters a value in the Name field. Which of the following validation server controls will you use to accomplish the task?

- A. RequiredFieldValidator
- B. RangeValidator
- C. CompareValidator
- D. CustomValidator

Correct Answer: A

QUESTION 3

Allen works as a Software Developer for ManSoft Inc. He develops a Web application using Visual Studio .NET. He adds a Web reference to an XML Web service named MyWebService in the application. MyWebService includes a method named MyMethod, which takes user identification number as a parameter and returns a DataSet object containing user information. The System.ArgumentException is thrown if the user identification number is not positioned between 1 and

500. Allen writes a try/catch block to capture the exceptions thrown by the Web service. Which of the following exceptions will the try/catch block catch if a user calls MyMethod passing 501 as a parameter?

- A. System.ApplicationException
- B. System.ArgumentNullException

- C. System.Web.Service.Protocols.SoapException
- D. System.Web.Service.Protocols.SoapHeaderException

Correct Answer: C

QUESTION 4

Allen works as a Software Developer for ManSoft Inc. He develops an application using Visual Studio .NET 2005. Only the employees of the company use the application. Allen wants to ensure that when a request on a page is made by a user the application asks for his authentication. Which of the following actions will Allen take to accomplish the task?

Each correct answer represents a part of the solution. Choose two.

- A. Specify User.Identity to authenticate the user.
- B. Set the impersonate attribute of the element to true.
- C. Specify the username and password attributes.
- D. Set the impersonate attribute of the element to false.

Correct Answer: BC

QUESTION 5

Mark works as a Software Developer for McRobert Inc. He develops an ASP.NET application using Visual Studio .NET. The application loads department name and employee data only once in each user's session. Mark creates two DataTable objects, named Employees and Departments. The

Departments object remains static, but the Employees object is modified whenever new employees join the company.

Mark wants to minimize the time it takes for the application to reload an ASP.NET page after each change. Which of the following statements will he use to accomplish this?

- A. Session("Departments") = Departments Cache("Employees") = Employees
- B. Cache("Departments") = Departments Cache("Employees") = Employees
- C. Session("Departments") = Departments Session("Employees") = Employees
- D. Cache("Departments") = Departments Session("Employees") = Employees

Correct Answer: D
