#### QUESTION 1

What happens in the Storage Assessment phase of the SAN architecture approach? (Choose three.)

- A. Business data is classified, utilization of data is explored, ownership and usage statistics of application volumes on systems are reported.
- B. analysis and documentation of business requirements, organization, physical environment, networks, and infrastructure management
- C. description of the feasibility of an effective solution based on obstacles and constraints
- D. an inventory of systems, software, employee skills, and internal processes/documentation
- E. selection and establishment of guidelines models, principles, and standards for the SAN

Correct Answer: ABD

---

#### QUESTION 2

What are two security requirements that have evolved as SANs increase in size and are inter-networked over MAN/WANs? (Choose two.)

- A. administrator and user access control/authentication
- B. increased controls and granularity in SAN access and security policy distribution
- C. strong or binding authentication among SAN devices (switches and servers)
- D. increased privacy for sensitive management data such as passwords and files

Correct Answer: AB

---

#### QUESTION 3

A SAN administrator plans on migrating the existing SAN topology. What two factors should be considered to prepare for this process? (Choose two.)

- A. number of storage systems
- B. application I/O profile
- C. the RAID level of the storage systems
- D. data locality

Correct Answer: BD

---

#### QUESTION 4

A SAN administrator needs to change the Domain ID and Core PID parameters on a switch that is part of a production fabric. Which two statements about this update are true? (Choose two.)

- A. This process can be performed with the switch online without disruption.
- B. The Core PID parameter does not need to be manually changed; it will automatically be selected.
- C. The switch must be rebooted to set the Domain ID and Core PID.
- D. This process cannot be performed with the switch online and is disruptive.
- E. The Core PID parameter must be manually changed as it is set to a default value in the factory.

Correct Answer: DE

---

#### QUESTION 5

SAN data management policies involve developing the necessary plans, processes and procedures \_\_\_\_\_.

- A. for classifying, storing, and recovering data
- B. to integrate with system management frameworks
- C. for file export and format sharing
- D. for export, print, or email of multiple SAN data reports

Correct Answer: A
