QUESTION 1

Scenario:

Following the merger of two online entertainment companies, management is integrating the two distinct service systems that were individually built and optimized prior to the acquisition. Reducing IT costs is a major goal, but the company

also wants a system infrastructure that allows quick, flexible handling of the online content requests, and that is highly reliable and has excellent expandability. The newly merged company is expanding its web-based music entertainment

services by establishing a mobile content business model and launching a comprehensive community site that allows multiple consumers access to content in collaboration with PCs and cell phones. The multiple consumer web service

includes video files, which occupy 90% or more of the total capacity and require an average of 400 Mbps network bandwidth for content distribution. These files piece a heavy burden on the distribution system, and this has prompted the

company to consider a virtual server environment. They need to achieve this without lowering service quality.

Some of the additional business criteria identified in customer planning interviews includes:

?Twenty or more physical servers need to be integrate into just three units ?The storage environment, previously structured as individual server units, requires shifting to shared storage using a Storage Area Network (SAN)

?Increase the overall system reliability by consolidating the system environment. ?Not interested in direct-attached storage. Shared storage makes it possible to increase usage efficiency above that offered by direct-attached storage, and also

adds a cost advantage. ?Management of all storage, HBAs, and switches should be done from a GUI- based dashboard . ?Multiple solutions, prioritized with a recommendation

Refer to the scenario:

Which Storage technology enables the server virtualization necessary to meet the company business needs?

- A. Unified storage management
- B. Block storage
- C. Large capacity drives
- D. Shared storage

Correct Answer: D

QUESTION 2

A customer needs to refresh a mission-critical Fibre Channel block storage solution. They need a budgetary quote by end of the week. Which key initial information should you gather to design an appropriate high-level HP Storage solution?

- A. number of host ports needed, current volume counts IOP averages, disaster recovery, and backup criteria

- B. current RAID levels, backup and replication criteria, number of SAN ports, and current disk speeds
- C. current RAW capacity, estimated array level IOPS, replication and backup criteria, and number of host ports needed.
- D. usable capacity, replication and backup criteria, number of thinly provisioned volumes, and deduplication ratios

Correct Answer: C

QUESTION 3

What does a zoning map describe?

- A. routing paths between fabrics
- B. inter-node communication access
- C. different responsibilities for system and storage management
- D. different time zones in an extended SAN

Correct Answer: B

QUESTION 4

An advantage of using HP StoreOnce Catalyst with the HP StoreOnce B6200 Backup System is a reduction in bandwidth between which two components?

- A. the HP StoreOnce B6200 Backup System and the tape library
- B. the media server and the client
- C. the HP StoreOnce B6200 Backup System and the client
- D. the media server and the HP StoreOnce B6200 Backup System

Correct Answer: D

QUESTION 5

What characteristic has the greatest impact on disk performance?

- A. drive latency
- B. I/O transfer size
- C. bus type
- D. upgrade from a 1Gb/s HBA to a2Gb/s HBA

Correct Answer: A
