QUESTION 1

An HP customer has a 16 node SAN. The enabled zoning configuration consists of only 1 zone with 12 members in it. The other 4 nodes communicate with _____ members.

- A. 16
- B. 0
- C. 4
- D. 12

Correct Answer: B

QUESTION 2

Scenario:

A large financial brokerage firm transacts about 32% of trades in the South American market. It offers brokerage services, investment banking, and financial advisory services to corporations and individuals. Recent expansions into other

worldwide markets have led to delays in processing trading data into usable reports that are timely enough for consumption by traders. The company is seeking a way to give traders much closer real-time data to use when making decisions

on trades, ultimately translating into higher results for its customers and higher competitive advantage for the firm. The company is projecting 100% data growth rates annually for the foreseeable future. A recent power outage at the production

data center that lasted 24 hours resulted in significant data loss. The production data center:

?All rack-mount servers

?Microsoft SQL Server 2000

?HP ProLiant DL385 servers

?Two HP Enterprise Virtual Array 6400 SANs

?Heterogeneous SAN environment consisting of HP B-series and HP C-series SANs

The on-campus Disaster Recovery Center is newly constructed and has not been configured or brought on line:

?BladeSystem environment

?Core edge design

?All HP B-series

?HP 3PAR StoreServ Storage System

The company pulls all of its trading information and data into a warehouse and then runs reports on the data internal reports determine whether to update asset allocation. Customer reports detail current holding and earnings of the firm's

funds. The most complex reports takes 36 hours to run and can only be run over the weekend to prevent disruption to operations; this results in traders receiving updated information only per week. There is also an option for customers to access web-based reports, and there is a need to update these reports more frequently as well.

Some of the additional business criteria identified in customer planning interviews includes:

?Produce daily reports rather than weekly

?Close to real time reporting to customers

?Scalable solution for further growth and without interruption ?Ability to add additional reports or analyze in new ways as the need arises ?Reduced IT overtime

?Concerned about application disruptions when adding or removing SAN devices ?Manage multiple fiber Channel ports as one switch resource ?Move from 4GB SAN to an 8GB Fibre Channel SAN.

?Looking for optional performance, less downtime, non-disruption expansion, and a Low price per port on the FC Switch deployment

?Consolidation of SANs for seamless sharing of server storage resources ?Multiple solutions, prioritized with recommendation

Refer to the scenario.

One proposed solution is to replace all 4Gb SAN switches with 8Gb SAN switches. Which change to the proposal will provide investment protection and still meet all of the financial brokerage firm requirements?

- A. Replace all 4Gb switches with a single 8Gb director.
- B. Keep the 4Gb switches, and add ISLs and a trunking license.
- C. Propose 16Gb SAN switches with 8Gb optics in ports currently needed.
- D. Replace half of the 4Gb switches new, and wait for the price of 8 Gb switches to drop.

Correct Answer: A

QUESTION 3

When connecting an HP ProLiant BL460c Gen8 server with an 8Gb Emulex HBA installed, what is the recommended SAN switch port speed setting for a B-Series 8/24 SAN switch?

- A. 2 GB
- B. 4 GB
- C. 8 GB
- D. Auto-Negotiate

Correct Answer: B

QUESTION 4

How many ports are supported on a 8and20q Fibre Channel in the Simple SAN Connection Kit

- A. 8 ports to 20 ports, in 4-port increments
- B. 12 ports to 20 ports, in 4-port increments
- C. 16 ports to 20 ports, in 2-port increments
- D. 16 ports to 20 ports, in 4-port increments

Correct Answer: A

QUESTION 5

A customer has multiple disk subsystems in a heterogeneous SAN that includes a mix of Sun and Windows 2003 Servers. Each server currently has its own tape backup device. Currently, backup requires 16 hours and requires three operators. How can an EBS SAN solution benefit this customer? (Choose two.)

- A. It decreases LAN throughput.
- B. It allows the concurrent use of all host-based tape drives.
- C. One server can better handle all the backup for the LUNs in the SAN.
- D. It better utilizes hardware investment.
- E. It simplifies backup management.

Correct Answer: DE
