- A. Inline deduplication
- B. Autonomic groups
- C. Network raid support
- D. Continuous availability

Correct Answer: B

---

#### QUESTION 5

A retail company is planning to create a web shop on their website to offer their products and services. They expect a large increase in sales and increased traffic to their website, which will result in increased disk I/O activity. Customer satisfaction is a priority. The website has to respond quickly, providing detailed product information, pictures, and documentation. Their current environment consists of two HP BladeSystem c7000 Enclosures connected to an EVA storage array over a small SAN.

What should you suggest to the customer to meet their requirements?

- A. Add more disks to the storage array.
- B. Add more memory to their servers.
- C. Add more blade servers to the enclosures.
- D. Add more HBAs to the servers.

Correct Answer: A
