QUESTION 1

Which performance counter will confirm the need to add more physical memory in the VMware ESXi 5 host?

- A. Memory swap in
- B. Memory balloon
- C. Memory ready
- D. Kernel swap in

Correct Answer: A

Reference: <http://searchsystemschannel.techtarget.com/feature/Monitoring-vSphere-CPU-and-memory-> (monitoring memory usage, 8th bulleted point) usage These counters, in particular the Memory Swap Used (Average) counter, will give you an idea of whether the ESX/ESXi host is under memory pressure. If the ESX/ESXi host is not suffering from memory pressure and you still suspect a memory problem, then the issue likely lies with the virtual machine.

QUESTION 2

An engineer is installing ESXi 4.1 on an HP ProLiant G7 server using media obtained from VMware. What does the engineer use to install the latest HP Common Information Model (CIM) Provides, HP Integrated Lights-Out (iLO) drives and HP Compaq ROM Utility (CRU) drives?

- A. HP ESXi offline Bundle
- B. ProLiant Support Pack
- C. HP Download Manager
- D. Services Pack for ProLiant

Correct Answer: A

QUESTION 3

Which HP tool is provided at no cost as part of HP Systems Insight Manager?

- A. Insight Dynamics
- B. Insight Remote Support Advanced
- C. Insight Control for System Center
- D. Insight Orchestration

Correct Answer: B

<http://h18013.www1.hp.com/products/servers/management/hpsim/index.html?jumpid=go/hpsim>

HP Insight Remote Support Advanced	Enhances HP SIM's event monitoring capabilities by sending automatic hardware event notification securely to HP, including entitlement, acknowledgement and status returns. It extends the intelligent analysis and diagnosis of events, optimizing availability and reducing manual intervention. Available as a feature of systems under warranty or contract obligation at no extra cost

QUESTION 4

You configured and installed the VCA on a server, but are unable to access VCRM using the administrator login credentials. What should you do?

- A. Log in using a separate network user login and password other than administrator
- B. Wait ten minutes for it to propagate through the network
- C. Reboot the system
- D. Change the VCRM trust relationship to Trust

Correct Answer: D

http://www.hp.com/wwsolutions/misc/hpsim-helpfiles/mxhelp/mxportal/en/admin_security_about_settingUpTrustRelationships.html

For Single Login and Secure Task Execution (STE) to work, the managed system must be running a supported agent and be configured to trust the HP Systems Insight Manager server.

Three levels of trust configuration are available.

Trust All. The managed system trusts any HP Systems Insight Manager server, without verifying its digital signature. This configuration is the easiest to enable, but it leaves your managed system open to any HP Systems Insight Manager

server request, including requests from HP Systems Insight Manager servers installed in a test environment or bogus requests formatted to appear as valid requests. Select this option with caution.

Trust By Name. The managed system trusts any of the HP Systems Insight Manager servers specifically named in the list without verifying the digital signature. This configuration is still susceptible to accepting bogus requests formatted as valid requests from the named servers.

Select this option with caution.

Trust By Certificate. The managed system only trusts HP Systems Insight Manager servers in the certificate list and verifies its digital signature. This configuration is the most secure option because it validates the digital signature of the request against a locally stored certificate, authenticating the sender and ensuring message integrity.

QUESTION 5

A customer with a BL620c G7 wants to add an expansion blade. Since the expansion Blade will have a halfheight server in the bay above it, which additional component is needed?

- A. A second PCI Express Mezzanine Pass-thru Card
- B. A coupler plate
- C. an additional Storage Expansion Blade
- D. a half-height blade blank

Correct Answer: B
