QUESTION 1

How does REt work?

- A. It prints a limited number of actual primary colors in one dot area or pixel.
- B. It subdivides pixels on the edges of outlines and smoothes the edges: thus creating the appearance of greater dpi.
- C. It produces smaller ink drops; which result in a larger color range, smoother transitions between colors, and greater depth of color.
- D. It creates a palette of grays by forming a diagonal grid of dot clusters.

Correct Answer: A

QUESTION 2
