QUESTION 5

Which items best describe HP Software's solutions and benefits for managing security within ALM? (Select three.)

- A. The integration of HP Fortify Software Security Center Solutions into ALM11 or QC10 bridges the functional gap between the IT security and pre-production testing (OA) and RandD (development) teams by facilitating defect tracking, which improves the overall quality, performance, and security of production applications.
- B. HP Fortify Software Security Center identifies and eliminates risk in existing applications and prevents the introduction of risk during application development.
- C. HP Fortify Software Security Center provides a dashboard view of the security identifies and eliminate risk in database applications and prevents the introduction of risk during application development.
- D. Secure ALM increases development productivity by automatically identifying and resolving security defects in production environments using Static Application Security Testing technology to reduce the total cost of security in production.
- E. As part of a comprehensive secure software development program, Fortify's Static and Dynamic Application Security Testing solutions not only improve the security of the application but also increase development productivity by reducing the need to resolve security defects once in production.
- F. HP Fortify Software Security Center identifies and effectively isolates vulnerable applications by the use of Threat Containment technology and intrusion detection systems, which results in more stable system availability and improved performance.

Correct Answer: ABD
