QUESTION 1

Which statement is true about "sticky" load balancing for Clusters?

A. The "clientip" setting does not apply to clusters, it only pertains to a Forwarder.

B. When set to "clientip" it uses the client\\'s IP address to bind the client to a particular target server.

C. When set to "clientip" it ensures that all subsequent requests are directed to the same client that made the initial request.

D. When set to "clientip" it allows a DX sticky cookie to be sent to and stored by the client based on the IP address.

Correct Answer: B

QUESTION 2

An enterprise has three FTP servers that can handle up to 200 connections each, one primary and two backup. They would like to have all initial traffic go to the primary server. If they run out of connections on the primary, traffic should then go to the first backup server. If they run out of connections on that server, then traffic should go to the third server. Which load balancing policy should be used to prevent excessive connections?

A. Backup Chaining

B. Max Connections

C. Weighted RoundRobin with weight set to 200 on the primary server

D. RoundRobin with Max Connections

Correct Answer: B

QUESTION 3

Which service uses AppRules?

A. Redirector

B. Forwarder

C. SLB

D. Cluster

Correct Answer: D

QUESTION 4
