QUESTION 1

Where do you configure the ability for the user to create support meetings?

- A. meeting
- B. sign-in policy
- C. role
- D. realm

Correct Answer: C

QUESTION 2

Which two options must be configured when using session start scripts, session end scripts, or both in a Windows environment? (Choose two.)

- A. skip if GINA enabled
- B. prioritize script if GINA enabled
- C. script permissions
- D. script location

Correct Answer: AD

QUESTION 3

Which three statements about role mapping are true? (Choose three.)

- A. Role mapping can be configured first, before creating the actual roles.
- B. Role mapping can be based on VLAN assignment.
- C. Role mapping can be based on a user attribute value.
- D. Role mapping can be based on custom expressions.
- E. Role mapping can be based on a certificate and its data.

Correct Answer: CDE

QUESTION 4

Which two options must be verified on the IVE device so that only trusted SSL Web sites can be viewed? (Choose two.)

- A. Verify that the certificate is associated with a virtual port.
- B. Verify that the certificate is installed under "Trusted Client CAs."
- C. Verify that "Allow browsing untrusted SSL websites" is not selected under "Web Options."
- D. Verify that the certificate is installed under "Trusted Server CAs."

Correct Answer: CD

QUESTION 5

You have successfully enabled and tested certificate-based user authentication. However, after properly revoking a particular user's certificate, the certificate can still be used to authenticate to the IVE device. What is a possible cause of the problem?

- A. When creating the user's certificate on your CA, you neglected to define it as "revocable."
- B. After revoking a user certificate, the IVE device can take up to an hour to learn of the revocation using OCSP.
- C. The time on the IVE device is not in sync with the time on the CA used to create the user certificate.
- D. You specified an incorrect admin DN when defining CDP settings on the IVE device.

Correct Answer: D
