A customer reports that BGP graceful restart is not working on R1. After a Routing Engine failover, R1 did not set the restart state bit in its Open message. The customer provides the BGP neighbor output shown in the exhibit.

Referring the exhibit, what is causing this problem?

A. BGP graceful restart is not enabled on R1.

B. BGP graceful restart is not enabled on the peer device.

C. The restart duration time is not configured on R1.

D. The restart duration time is not configured on the peer device.

Correct Answer: A

QUESTION 3

Your Layer 2 network uses VLAN IDs 100 through 400 and you are required to load-balance these VLANs between two different root bridges. You are currently using the default RSTP settings and notice that all VLANs are using the same root bridge.

How do you ensure the VLANs are load-balanced between two root bridges?

A. Configure MSTP with two MSTI regions and split the VLAN range between them.

B. Configure VSTP with two VLAN groups and split the VLAN range between them.

C. Configure two RSTP instances and split the VLAN range between them.

D. Configure STP and RSTP and split the VLAN range between them.

Correct Answer: A
