### QUESTION 1

David has built a form that uses XForms Panes, but he cannot access the fields and labels inside a pane. Why can't David access the fields and labels, and how can he correct this problem?

- A. XForms Panes are actually iframes inside an XFDL form. The way to reference the values of the items inside the pane is through the XForms data model.
- B. XForms Panes are insulated from the XFDL items outside of them, as the panes are given a dynamically generated SID at runtime. XForms Panes are unique in that they require the reference to contain ".PANE" in order to access the items inside the pane. For example: PAGE1.AddressPane.PANE.FIELD1.
- C. XForms Panes are insulated from the XFDL items outside of them, as the panes are given a dynamically generated SID at runtime. The best way to reference the values of the items inside the pane is through the XForms data model.
- D. XForms panes are actually iframes inside an XFDL form. The best way to access the values inside the items within the XForms pane is to use the API.
