QUESTION 1

Which Master plan parameter is only used with job scheduling?

- A. Finite capacity
- B. Finite property
- C. Bottleneck scheduling
- D. Reduction principle

Correct Answer: B

QUESTION 2

A user creates a purchase order to fulfill a sales order and sets the update marking to "no". The delivery day for the purchase order and the sales order match each other. The purchase order is then delayed two days, which the user updated on the purchase order. Later, the user performs Master scheduling and creates a planned purchase order to fulfill the sales order with the same delivery date as the sales order.

Why is the planned order created?

- A. Negative days is below two days.
- B. Positive days is below two days.
- C. Negative time fence is below two days.
- D. Planned order time fence is below two days.

Correct Answer: A

QUESTION 3

A company manufactures televisions for customers on demand, but does not keep cabinets and prints in inventory. Therefore, the production of cabinets and prints is carried out parallel to the assembly of the televisions. What is the correct solution to use in this situation?

- A. Activate the route network parameter, and build the route structure using the "next operation".
- B. Activate the route network parameter, and build the route structure using priority on the work centers.
- C. De-activate the route network parameter, and build the route structure using the "next operation".
- D. De-activate the route network parameter, and build the route structure using priority on the operations.

Correct Answer: A

QUESTION 4

A company has limited capacity on its machines, but the capacity of the operators is unlimited (already set on the work center). The team manager wants to plan on the machinery and see the required staff hours in the production plan.

What setup meets the managers requirements?

- A. The route is set up with two operations with different operation numbers, one to control the operator and one to control the machinery. Scheduling is done with finite capacity.
- B. The route is set up with two operations with the same operation number, a primary one to control the machinery and a secondary one to control the operator. Scheduling is done with finite capacity.
- C. The route is set up with the use of priority on operations, and scheduling is done with infinite capacity.
- D. The route is set up with the use of priority on operations. The scheduling is done with infinite capacity, and the task group is created on the operators resource.

Correct Answer: B

QUESTION 5

What defines the capacity for a work center?

- A. Working times calendar
- B. Working times calendar, and run time
- C. Operations scheduling percentage
- D. Working times factor

Correct Answer: A
