QUESTION 1

Which of the following areas would an administrator go to, to change the Owner of an object?

- A. Permissions tab within the Properties for that object.
- B. Ownership tab within Tools => Users menu.
- C. Ownership tab within Tools => Object Permissions menu.
- D. Object Permission section within the Deployment Manager web client.

Correct Answer: A

QUESTION 2

A customer wants to automate the rerun of a CandDS job each time a Modeler stream in one of the jobsteps is updated. How can this be achieved?

- A. A message-based job schedule can run a job, based on a notification message sent at the update of the Modeler stream.
- B. This can only be achieved through a time based schedule if the Modeler stream is updated at fixed times.
- C. CandDS does not allow this kind of dependency
- D. Define a "loop" connector between the Modeler jobstep and the job.

Correct Answer: A

QUESTION 3

A customer is reporting an issue with setting CandDS system configuration options via a web interface. Which application is he using?

- A. Deployment Portal
- B. Deployment Manager
- C. Browser-based Deployment Manager
- D. Enterprise View

Correct Answer: C

QUESTION 4

A user created a job with two connected jobsteps. She wants the second jobstep to run only when the first jobstep failed. Which of the following describes all connectors that will allow this behavior?

- A. Sequential connector, Fail connector
- B. Pass connector, Sequential connector
- C. Fail connector, Conditional connector
- D. Pass connector, Conditional connector

Correct Answer: C

QUESTION 5

If an end user knew the name of an object but was not sure of its location, how could the end user find the object within the repository?

- A. Tools => Find menu.
- B. Locate dialogs found under the Tools menu.
- C. Right-click the Content Server Connection folder and select the '\\Search\\' option.
- D. Search menu within Server Administration tab.

Correct Answer: C
