QUESTION 1

Which of these are TYPICAL uses for extending P8 with subscription event handlers?

- A. Generating nightly statistical reports of the numbers of documents using storage areas.
- B. Checking a database partition for adequate space before storing large content.
- C. Monitoring server environmental factors like temperature and power consumption.
- D. Launching a workflow in response to a document creation, modification, or deletion.

Correct Answer: D

QUESTION 2

In what significant functional way or ways do the CE Java and .NET APIs differ?

- A. Only the CE .NET API can use Content Management Interoperability Services (CMIS) as a transport.
- B. They have different authentication techniques and distributed transaction handling.
- C. The CE Java API cannot use web services as a transport.
- D. The CE .NET API uses OLEDB for executing CE SQL queries.

Correct Answer: B

QUESTION 3

While implementing a Workflow solution on FileNet P8, a business requirement lists the need to integrate existing legacy applications in the workflow. The legacy mainframe applications have Java interfaces that can be invoked from the workflow.

Which is the best method to achieve this integration?

- A. Use Java Message Service integration.
- B. Use a REST based integration from the workflow.
- C. Ask the legacy application maintenance team to expose the functionality as a web service.
- D. Develop a custom Java component using Component Integrator to invoke the legacy application.

Correct Answer: D

QUESTION 4

As part of an initial setup of Deployment Manager, a base set of XML files can be created to use as a template for configuration.

What is the command line used on a Microsoft Windowsbased server to create these XML files?

- A. DeploymentManagerCmd.bat --samples.
- B. DeploymentManagerCmd.bat --operation CreateBaseXML.
- C. DeploymentManagerCmd.bat --operation CreateEnvironment.
- D. DeploymentManagerCmd.bat --operation CreateDeployPackage.

Correct Answer: A

QUESTION 5
