QUESTION 1

Which one of the following options is CORRECT about Temporal Tables?

- A. Temporal tables are complex to maintain and require major application changes.
- B. Temporal tables require constant changes to the operating system timestamp in order to navigate through time in the database.
- C. Temporal tables are used to model data in the past and present. They cannot be used to model data in the future.
- D. Temporal tables are used to model data in the past, present, and future.

Correct Answer: D

QUESTION 2

Which one of the following options is CORRECT?

- A. In both DB2 pureScale and HADR environments data is available all the time.
- B. DB2 pureScale transfers log files from a primary database to a standby database.
- C. HADR persists data in the cluster caching facilities (CFs).
- D. In a pureScale environment, the data is available all the time, while in a HADR environment the data is available most of the time.

Correct Answer: D

QUESTION 3

What are some of the benefits of DB2 Express?

- A. DB2 Express has affordable licensing terms with all of the core features of the DB2 engine.
- B. DB2 Express is designed for development and testing. It is not used as a production database.
- C. DB2 Express is fastest and most powerful DB2 edition.
- D. DB2 Express is a tool that allows DBAs to quickly solve complex database issues.

Correct Answer: A

QUESTION 4

Which of the following is NOT valid state for the Cluster Caching Facility?

- A. ONLINE

- B. PRIMARY
- C. ERROR
- D. PEER

Correct Answer: A

QUESTION 5

Which one of the following options describes a benefit of Geographically Dispersed pureScale Cluster (GDPC)?

- A. GDPC allows the placement of redundant cluster caching facilities at different locations. The pureScale members must be at the same physical location.
- B. GDPC provides independent transaction processing, which means that on normal operations, each cluster caching facility is at a different location processing the transactions from the members on its respective location.
- C. GDPC provides active / active system availability, which means that during normal operations, the pureScale members at both locations are retrieving data from their local host discs, maintaining an optimal level of activity on all members, both within and between locations.
- D. GDPC provides active / active system availability, which means that during normal operations, the pureScale members at both locations are sharing the workload between them as usual, maintaining an optimal level of activity on all members, both within and between locations.

Correct Answer: D
