-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

In an 802.11n 2.4 GHz BSS, what prevents each station from using the full network bandwidth (e.g. 130 Mbps) when multiple clients are actively exchanging data with the AP? (Choose two)

- A. Radio receiver hardware cannot process data as quickly as it can be transmitted.
- B. Half of the bandwidth is allocated to uplink traffic and half to downlink traffic.
- C. The DCF and EDCA coordination functions require backoff algorithms
- D. WLAN devices cannot detect collisions and must receive positive frame acknowledgment.
- E. WLANs rely on the CSMA/CD protocol and must wait a collision detection period after each frame is transmitted.

Correct Answer: CD

QUESTION 2

In an enterprise WLAN, what condition will prevent a dual-band HT client device from performing a fast and seamless transition (i.e. latency-sensitive applications are not disrupted) between two access points that are managed by the same WLAN controller?

- A. The current AP is using channel 1 and the new AP is using channel 40.
- B. The SSID of the current AP does not match the SSID of the new AP.
- C. The current AP supports only ERP and the new AP is HT capable.
- D. The access points are hiding the SSID in Beacons and Probe Response frames.

Correct Answer: B

QUESTION 3

What phrase defines Equivalent Isotropically Radiated Power (EIRP)?

- A. Radio transmitter output power minus attached cable and connector loss
- B. Radio transmitter output power only
- C. Power supplied to the transmit antenna input plus antenna gain
- D. Reflected power due to an impedance mismatch in the signal path
- E. Power supplied from the transmission line to the antenna's input

Correct Answer: C

QUESTION 4

Given: XYZ Company has decided to install an 802.11 WLAN system that will support 1000 wireless users, but they are concerned about network security. XYZ is interested in deploying standardized security features. In addition to WPA2Enterprise with PEAP and role-based access control, XYZ would like to support management frame protection as well as a fast secure roaming protocol for future mobile handsets.

As XYZ Company selects a product to deploy, what two IEEE amendments should be supported to provide the management frame protection and fast secure roaming security features? (Choose two)

- A. 802.11j
- B. 802.11p
- C. 802.11r
- D. 802.11u
- E. 802.11w
- F. 802.11z

Correct Answer: CE

QUESTION 5

What statements about the SSID are true? (Choose two)

- A. The SSID is a security session identifier used in RSNs.
- B. The SSID must be included in an association request frame.
- C. The SSID is an alphanumeric value assigned to device manufacturers by the IEEE.
- D. The SSID is a pseudo-random number assigned to each client by an AP.
- E. The SSID is an alphanumeric value with a maximum length of 32 octets.
- F. When configuring a new network, creating an SSID is optional.

Correct Answer: BE
