- ⚙️ **365 Days** Free Update
- ⚙️ **800,000+** Satisfied Customers

### QUESTION 1

In a long-distance RF link, what statement about Fade Margin is true?

- A. Fade Margin is an additional pad of signal strength designed into the RF system to compensate for unpredictable signal fading.
- B. The Fade Margin of a long-distance radio link should be equivalent to the receiver's antenna gain.
- C. A Fade Margin is unnecessary on a long-distance RF link if more than 80% of the first Fresnel zone is clear of obstructions.
- D. The Fade Margin is a measurement of signal loss through free space, and is a function of frequency and distance.

Correct Answer: A

---

### QUESTION 2

The client devices that connect to your network include a mix of dual-band 802.11n, single-band 802.11b/g, and some 802.11a/g. Your access points are configured with the same SSID on both the 2.4 and 5 GHz bands. The APs are also configured to prioritize client connectivity to 5 GHz. How does an AP perform band steering to encourage clients to use 5 GHz?

- A. When the client sends a probe request in the 2.4 GHz band, the AP may reply with information about the 5 GHz BSS.
- B. The AP may ignore the initial probe requests or 802.11 authentication requests sent in the 2.4 GHz band by dual-band clients
- C. The AP may allow an 802.11 association with the client in the 2.4 GHz band, then send unicast channel switch announcements to the client announcing the 5 GHz channel as the new channel.
- D. After receiving probe request frames from the same client in both bands, the AP may send an association request frame to the client in the 5 GHz band.
- E. The AP may allow an 802.11 association with the client in the 2.4 GHz band, then the AP may perform a transparent client handoff by transferring the client's MAC address to the 5 GHz radio.

Correct Answer: B

---

### QUESTION 3

In an 802.11n WLAN with a heterogeneous set of associated client devices including 802.11b, 11g, and 11n, what HT protection mode will the BSS use?

- A. Mode 0: No protection mode (Greenfield)
- B. Mode 1: Nonmember protection mode
- C. Mode 2: 20 MHz protection mode

D. Mode 3: Non-HT mixed mode

Correct Answer: D

---

#### QUESTION 4

What answers correctly complete the following sentence? \_\_\_\_\_ and \_\_\_\_\_ carrier sense functions are used to determine whether the wireless medium is idle or busy. (Choose 2)

- A. Passive
- B. Pseudo-random
- C. Virtual
- D. Active
- E. Physical
- F. Interframe
- G. Vector

Correct Answer: CE

---

#### QUESTION 5

Prior to association, what parameter can 802.11 client devices measure and use to select the optimal access point for association?

- A. Signal strength of access point beacons
- B. Proximity to potential access points
- C. Retry rate of probe request and response frames
- D. Average round trip time to reach the IP gateway
- E. Number of nearby RF interference sources

Correct Answer: A
