### QUESTION 1

A company recently purchased the Symantec Endpoint Protection 12.1 (SEP) product. It has two datacenters and wants to configure SEP for high availability, so that if one datacenter goes down, the SEP clients can smoothly fail over to the other datacenter. What should be done to allow SEP clients to fail over from one datacenter to the next?

- A. Install a Group Update Provider at each datacenter and configure replication.
- B. Install a Symantec Protection Center at each datacenter and configure replication.
- C. Install a Symantec Endpoint Protection Manager at each datacenter and configure replication.
- D. Install a Symantec Site Server at each datacenter and configure replication.

Correct Answer: C

### QUESTION 2

Refer to the exhibit.

Inheritance is turned on only for groups England, Sales, Laptops, and Manchester (highlighted). Without turning inheritance off, which top level group must be modified to affect users in the Laptop group?

- A. My Company
- B. England
- C. London
- D. Sales

Correct Answer: C

### QUESTION 3

An administrator is troubleshooting a Symantec Endpoint Protection (SEP) replication. Which component log should the administrator check to determine whether the communication between the two sites is working correctly?

- A. Apache Web Server
- B. Tomcat
- C. SQL Server
- D. Group Update Provider (GUP)

Correct Answer: B

---

#### QUESTION 4

Administrators at a company share a single terminal for configuring Symantec Endpoint Protection. The administrators want to ensure that each administrator using the console is forced to authenticate using their individual credentials. They are concerned that administrators may forget to log off the terminal, which would easily allow others to gain access to the Symantec Endpoint Protection Manager (SEPM) console. Which setting should the administrator disable to minimize the risk of non-authorized users logging into the SEPM console?

- A. allow users to save credentials when logging on
- B. delete clients that have not connected for specified time
- C. lock account after the specified number of unsuccessful logon attempts
- D. allow administrators to reset the passwords

Correct Answer: A

---

#### QUESTION 5

An administrator is responsible for the Symantec Endpoint Protection architecture of a large, multi-national company with three regionalized data centers. The administrator needs to collect data from clients; however, the collected data must stay in the the local regional data center. Communication between the regional data centers is allowed 20 hours a day. How should the administrator architect this organization?

- A. set up 3 domains
- B. set up 3 sites
- C. set up 3 locations
- D. set up 3 groups

Correct Answer: B
