QUESTION 1

Your company is very cyclical in nature, with periods of very high demand and periods of very low demand. You\\'ve heard that Distributed Power Management (DPM) may be helpful in saving money. What function does DPM perform?

A. Suspends idle VMs.

B. Moves VMs onto fewer servers during periods of low demand, shutting the others off and waking them up when load increases.

C. Reduces or raises clock speeds of the CPU to optimize energy usage.

D. Reduces or raises clock speeds of memory to optimize energy usage.

Correct Answer: B

QUESTION 2

You work in a highly regulated, secure environment. You have been tasked with finding a solution that will analyze the environment and report on any changes in the environment to ensure you meet the compliance requirements in your industry. Which VMware product can help to provide this solution?

A. vCenter Operations Manager

B. vCenter Change Management

C. vCenter Configuration Manager

D. vCloud Director

Correct Answer: C

QUESTION 3

A large hospital has called you to consult on their new VMware deployment. They are concerned about the management for the new virtual networks. What can you tell them about the virtual switches?

A. Standard switches can only be managed through the command line

B. Distributed switches cannot be managed by using vCenter

C. Standard switches can be managed through vCenter, or by going directly to the ESXi host

D. Distributed switches can only managed through the physical ESXi server

Correct Answer: A

QUESTION 4

The executives in your company have been following recent events and decide that they need a DR plan. They want an automated solution with the ability to non-disruptively test it to ensure that it will work when there is a real disaster. Which technology meets these requirements?

A. Site Recovery Manager (SRM)

B. Data Protection

C. High Availability (HA)

D. vSphere Replication (VR)

Correct Answer: A

QUESTION 5

Developers in your organization are concerned about moving away from physical equipment to virtual machines as they don\\'t understand what a VM is. You explain that a VM is:

A. A conceptual framework for developing operating systems.

B. Similar to a physical computer, except many VMs can run on the same hardware.

C. The same thing as a physical computer.

D. A conceptual framework for developing applications.

Correct Answer: B
