QUESTION 1

You are a VMware technical consultant for an application development project. The system consists of a multitier application. The team consists of you, five developers, and a project manager. At the project kickoff meeting, you are tasked with creating the servers for each stage of the development life cycle the team is using: development, testing, staging, and production. During the meeting, you come to the conclusion that the technical specifications have yet to be defined or will likely change. Which of the following scaling approaches for guest workload design would be most appropriate?

- A. Adaptive
- B. Predictive

Correct Answer: A

QUESTION 2

A validation plan should be based on estimated workloads and user behavior.

- A. True
- B. False

Correct Answer: B

QUESTION 3

By default, Storage DRS is enabled.

- A. True
- B. False

Correct Answer: B

QUESTION 4

Best practices should always be followed.

- A. True
- B. False

Correct Answer: B

QUESTION 5

You are a VMware architect attending a project kickoff meeting. The project vision is to "consolidate all existing physical workloads to a vSphere 5 platform." The high-level requirements are defined during the design kickoff meeting. Which of the following is true?

- A. You should make design choices based on current best practices and case studies from previous vendor implementations.
- B. You should review the current server estate to ensure the viability of the project in relation to the requirements and establish the tasks required to achieve the vision.
- C. You should construct a logical and physical design, based on requirements and guide best practices from previous implementations in the community.

Correct Answer: B
